Part I.

Welcome

Our Objective

Please consider this resource to be a **Living Document**. The code in this repository is regularly being updated and improved. Please refer to releases for finalized products and project milestones.

At this time, these master production and AKFIN tables are **provisional** and we are welcoming feedback before the 2024 survey season. We look forward to hearing from you. Do not hesitate to reach out (to us at either afsc.gap.metadata@noaa.gov or GitHub issues), especially if you find discrepancies in the data or want to suggest improvements to infrastructure. Thank you in advance for your collaboration and partnership with us as we develop our future data universe.

Our Objective

As part of our commitment to open science and transparency, we provide this interactive metadata guide to compliment our public-domain data. Please refer to our Draft Data Changes Brief. Once finalized, this language will be included here.

User Resources

- Groundfish Assessment Program Bottom Trawl Surveys
- AFSC's Resource Assessment and Conservation Engineering Division
- Survey code books
- Publications and Data Reports
- Research Surveys conducted at AFSC

Background of the gap_products repo

This work is the result of the massive efforts of three concurrent GAP working groups:

- (1) **Index Computation Working Group:** consolidation of the methods used to produced design-based estimates of abundance and size/age composition between the Bering Sea and AIGOA survey regions.

Background of the gap_products repo

Figure 1.: Sorting and weighing fish on deck on the 2022 Bering Sea groundfish survey aboard the F/V Alaska Knight. Credit: Emily Markowitz/NOAA Fisheries.

Major Advantages

- (2) **Data Processes Working Group:** reorganization of the Oracle data infrastructure that houses the standard data products produced by GAP.
- (3) **Gulf of Alaska Survey Restratiification Working Group:** implementation of a new stratified random survey design in the Gulf of Alaska bottom trawl survey.

We began this effort in collaboration with the Status of Stocks team (SSMA) to present both the orientation and opportunity to interact with Gulf of Alaska data from the restratiified survey design that we will be implementing in the 2025 field season. As that part of the project evolved, the Data Processes Working Group identified the opportunity and need for gaining efficiencies by redesigning and consolidating the Oracle objects (tables and materialized views) that have historically served these data. The Index Computation Working Group also identified an opportunity to gain efficiencies by consolidating the various scripts that were developed independently by both survey region groups into a workflow that was more accessible and documented.

The Index Computation Working Group developed the gapindex R package, a code repository that consolidates the code that calculates the various standard GAP products (e.g., CPUE, total biomass, size/age composition) for both the Bering Sea and AIGOA survey regions. The Data Processes Working Group was responsible for compiling the data structures needed to support data product tables that were consistent across all of the AFSC GAP survey regions as well as the creation of the GAP_PRODUCTS oracle schema that will house these consolidated products in the future.

This gap_products GitHub repository houses the code that will conduct the “standard production run” that produces the new data tables via the gapindex R package and upload those tables to the GAP_PRODUCTS Oracle schema.

Major Advantages

- Consolidated production tables include all standard data products for all surveys. Data will be provided in the same format, with the same units, and created using the same mathematical methodology. This should limit data pulls, reduce complexity for data access, and reduce complicated secondary data wrangling.
- Consistent naming conventions for schemata, tables, and column metadata. Columns across all tables will use the same naming conventions, units, and data types. Restricting standard data product table content to absolutely necessary columns.

Major Advantages

- Removal of redundant data columns that can be acquired by joining to reference tables is key for providing consistent and up-to-date data while limiting data table sizes.
- Consolidation and repurposing of Oracle schemata. This will help the GAP team limit unnecessary access to unprocessed or problematic data by outside users.
- Vetted data methods. All code and data inclusion decisions and wrangling are documented in the {gapindex} R package. Streamlined and rapid data production. Improved and consolidated data creation and documentation provide data creators and users with greater confidence in the data products and enhanced ability to share the data.

1. Survey Background

1.1. What is the research objective?

The objectives of these surveys are to:

- monitor trends in the marine ecosystem of the Bering Sea, Aleutian Islands, and Gulf of Alaska
- produce fishery-independent biomass and abundance estimates for commercially important fish and crab species
- collect biological and environmental data for use in ecosystem-based fishery management.

Learn more about the program

1.2. Who is conducting the research?

Scientists from the Alaska Fisheries Science Center conduct these bottom trawl surveys with participation from the Alaska Department of Fish & Game (ADF&G), the International Pacific Halibut Commission (IPHC), and universities. This research is conducted on chartered fishing vessels.

1. Survey Background

1.3. Bottom trawl surveys and regions

Bottom Trawl Survey Regions

AFSC RACE Groundfish and Shellfish Public Data Coverage

Each survey conducted by the Groundfish Assessment Program are multispecies bottom trawl surveys. We collect environmental and biological data to assess how climate variability and loss of sea ice are affecting bottom-dwelling marine life on the Bering Sea shelf. We monitor trends in the distribution (location and movement patterns) and abundance of groundfish and crab species as well as oceanographic data (e.g., water temperature, depth). We collect biological information such as organism weight, length, stomachs to learn about diets, and otoliths to determine fish ages. We use this information in annual stock assessments and to assess the state of the ecosystem. This research is conducted on fishing industry contract vessels.

Table 1.1.: Survey summary stats

Survey	Survey Definition ID	Years	Depth (m)	Area (km ²)	# Statistical Areas	# Possible Stations
Aleutian Islands Bottom Trawl Survey	52	2022 - 1980 (16)	1 - 500	64,415.0	80	1,312
Eastern Bering Sea Slope Bottom Trawl Survey	78	2016 - 2002 (6)	201 - 800	21,134.2	4	

1. Survey Background

Survey	Survey Definition ID	Years	Depth (m)	Area (km2)	# Statistical Areas	# Possible Stations
Eastern Bering Sea Crab/Groundfish Bottom Trawl Survey	98	2023 - 1982 (41)	1 - 200	492,989	29	515
Gulf of Alaska Bottom Trawl Survey	47	2023 - 1984 (18)	1 - 1,000	314,087.4	39	6,939
Northern Bering Sea Crab/Groundfish Survey - Eastern Bering Sea Shelf Survey Extension	143	2022 - 2010 (5)	1 - 100	198,866	4	144

1.3.1. Aleutian Islands

(Von Szalay and Raring, 2020)

- Upper Continental Slope of the Aleutian Islands from Unimak Pass to Stalemate Bank
- Triennial (1990s)/Biennial since 2000 in even years, since 1992
- Modified Index-Stratified Random of Successful Stations Survey Design
- Important commercial fish species include Atka mackerel, Pacific ocean perch, walleye pollock, Pacific cod, sablefish, and other rockfish species.

1.3.2. Gulf of Alaska

(Von Szalay and Raring, 2018)

- Continental Shelf and Upper Slope of the Gulf of Alaska extending from the Islands of Four Mountains 2,300 km east to Dixon Entrance
- Triennial (1990s)/Biennial since 2001 in odd years, since 1991
- Stratified Random Survey Design
- Important commercial species in the Gulf of Alaska include Pacific ocean perch, walleye pollock, Pacific cod, flatfish, and other rockfish species.

1. Survey Background

1.3.3. Eastern Bering Sea Shelf

(Markowitz et al., 2023)

- The continental shelf of the eastern Bering Sea from the Aleutian Islands to the Bering Strait
- Conducted annually since 1982.
- Uses a stratified systematic sampling survey design with fixed stations at center of 20 x 20 nm grid.
- Similar in design to the northern Bering Sea shelf bottom trawl survey.
- Focus species for the Bering Sea include walleye pollock, Pacific cod, Greenland turbot, yellowfin sole, northern rock sole, red king crab, and snow and Tanner crabs.

1.3.4. Northern Bering Sea

(Markowitz et al., 2023)

- The continental shelf of the northern Bering Sea, including the area north of St. Lawrence Island and Norton Sound
- Biennial/Annual; conducted intermittently since 2010
- Uses a stratified systematic sampling survey design with fixed stations at center of 20 x 20 nm grid.
- Similar in design to the eastern Bering Sea shelf bottom trawl survey.

1.3.5. Eastern Bering Sea Upper Continental Slope

(Hoff, 2016)

- The eastern Bering Sea upper continental slope survey area extends from Unalaska and Akutan Islands to the U.S.-Russian Maritime Boundary at 61° N near the International Date Line (166° E to 180° W) at depths from 200 to 1,200 m
- Conducted intermittently since 2002 (funding dependent)
- Modified Index-Stratified Random of Successful Stations Survey Design
- Focus species for the Bering Sea slope include giant grenadier, Pacific ocean perch, popeye grenadier, walleye pollock, and arrowtooth flounder.

1. Survey Background

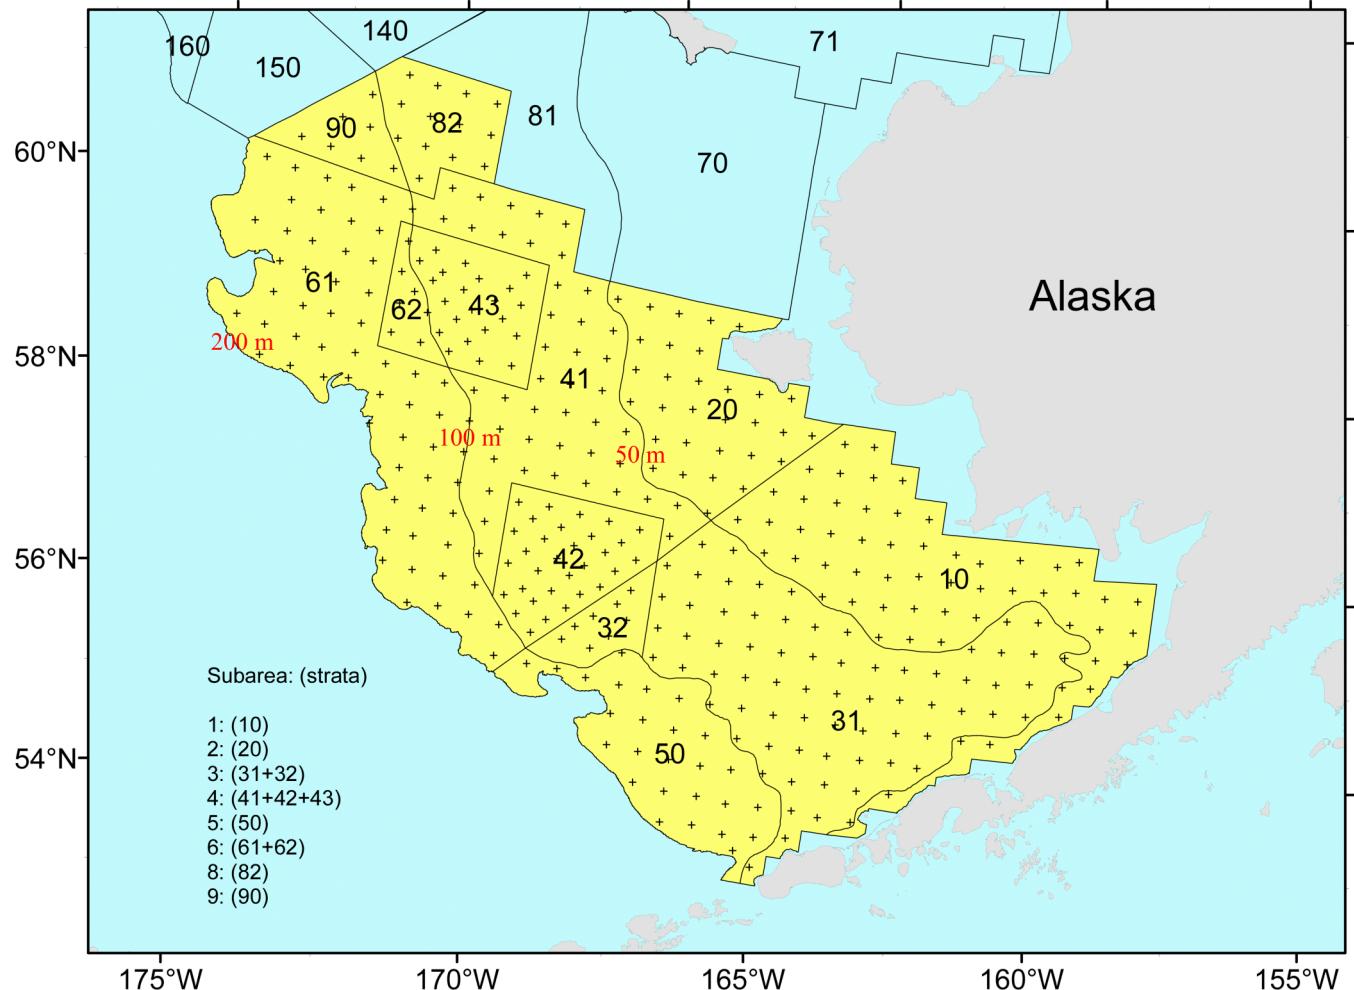

Figure 1.1.: Strata used in the Eastern Bering Sea Survey.

1. Survey Background

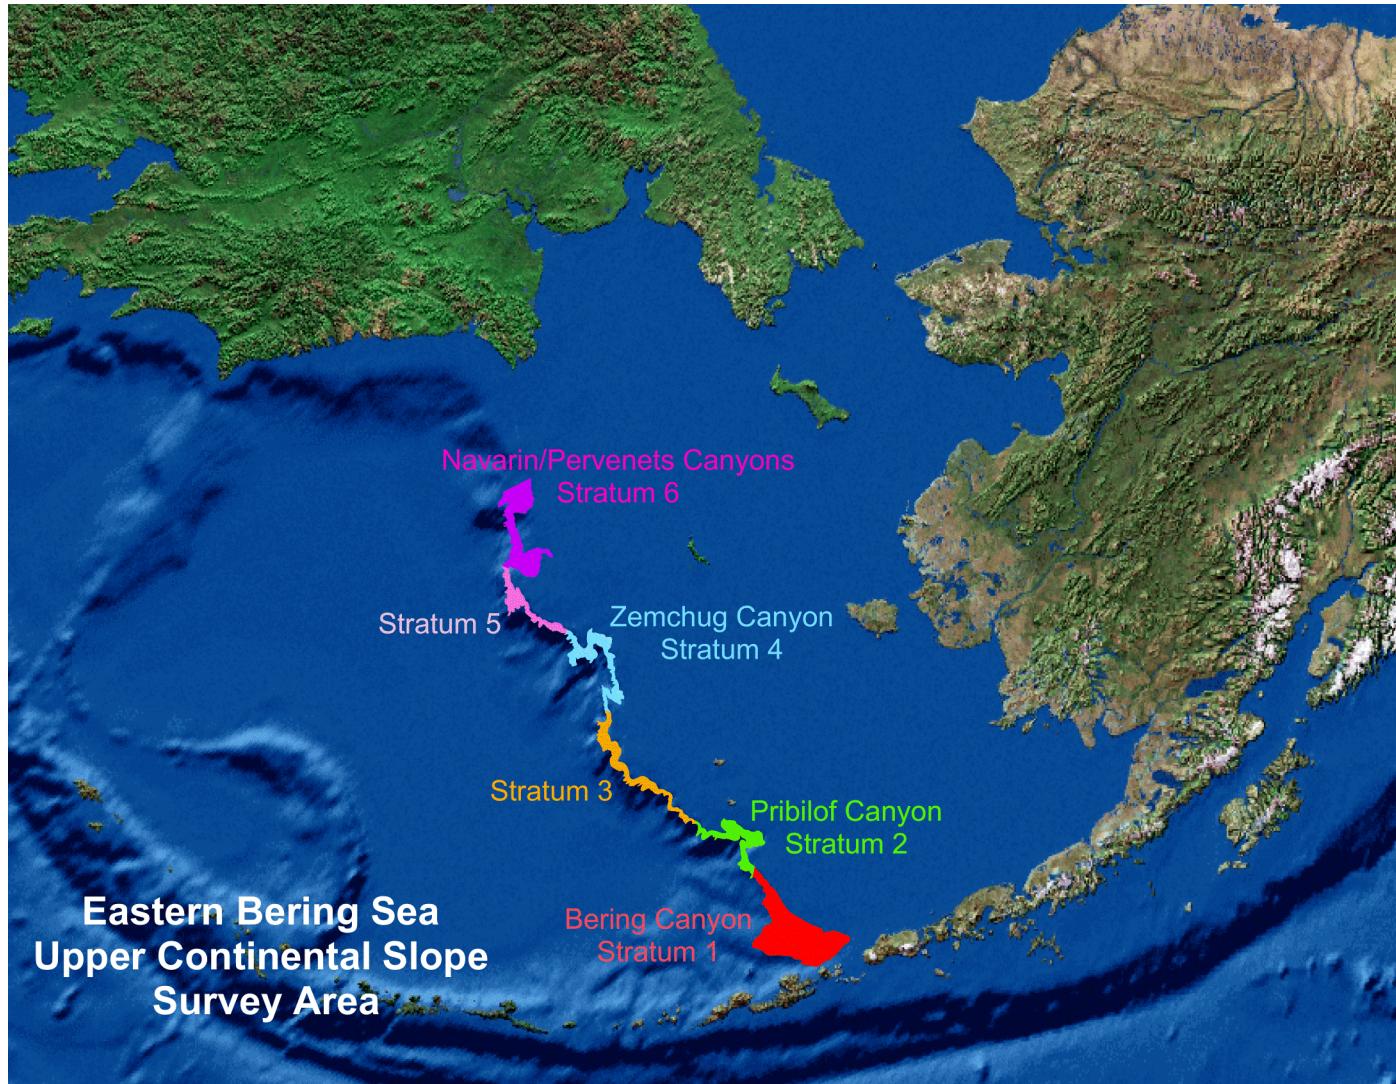

Figure 1.2.: Strata used in the Bering Sea Slope Survey.

2. Workflow

The code/run.R script houses the sequence of programs that calculate the standard data products resulting from the NOAA AFSC GAP bottom trawl surveys. Standard data products are the CPUE, BIOMASS, SIZECOMP, and AGECOMP tables in the GAP_PRODUCTS Oracle schema. The tables are slated to be updated twice a year, once after the survey season following finalization of that summer's bottom trawl survey data to incorporate the new catch, size, and effort data and once prior to an upcoming survey to incorporate new age data that were processed after the prior summer's survey season ended. This second pre-survey production run will also incorporate changes in the data due to the specimen voucher process as well as other post-hoc changes in the survey data.

Below is a summary of the workflow:

1. Import versions of the tables in GAP_PRODUCTS locally within the gap_products repository to compare with the updated production tables. Any changes to a production table will be compared and checked to make sure those changes are intentional and documented.
2. Use the gapindex R package to calculate the four major standard data products: CPUE, BIOMASS, SIZECOMP, AGECOMP. These tables are compared and checked to their respective locally saved copies and any changes to the tables are vetted and documented. These tables are then uploaded to the GAP_PRODUCTS Oracle schema.
3. Calculate the various materialized views for AKFIN and FOSS purposes. Since these are derivative of the tables in GAP_PRODUCTS as well as other base tables in RACEBASE and RACE_DATA, it is not necessary to check these views in addition to the data checks done in the previous steps.

2.1. Data levels

GAP produces numerous data products* that are subjected to different levels of processing, ranging from raw to highly-derived. The suitability of these data products

2. Workflow

for analysis varies and there is ambiguity about which data products can be used for which purpose. This ambiguity can create challenges in communicating about data products and potentially lead to misunderstanding and misuse of data. One approach to communicating about the level of processing applied to data products and their suitability for analysis is to describe data products using a Data Processing Level system. Data Processing Level systems are widely used in earth system sciences to characterize the extent of processing that has been applied to data products. For example, the NOAA National Centers for Environmental Information (NCEI) Satellite Program uses a Data Processing Level system to describe data on a scale of 0-4, where Level 0 is raw data and Level 4 is model output or results from analysis. Example of how NASA remote sensing data products are shared through a public data portal with levels of data processing and documentation.

For more information, see Sean Rohan's October 2022 SCRUGS presentation on the topic.

- **Level 0:** Raw and unprocessed data. Ex: Data on the G drive, some tables in RACE_DATA
- **Level 1A:** Data products with QA/QC applied that may or may not be expanded to analysis units, but either not georeferenced or does not include full metadata. Ex: Some tables in RACE_DATA and RACEBASE
- **Level 2:** Analysis-ready data products that are derived for a standardized extent and account for zeros and missing/bad data. Ex: CPUE tables, some data products in public-facing archives and repositories
- **Level 3:** Data products that are synthesized across a standardized extent, often inputs in a higher-level analytical product. Ex: Abundance indices, some data products in public-facing archives and repositories
- **Level 4:** Analytically generated data products that are derived from lower-level data, often to inform management. Ex: Biological reference points from stock assessments, Essential Fish Habitat layers, indicators in Ecosystem Status Reports and Ecosystem and Socioeconomic Profiles

3. News

3.1. Future plans

3.1.1. GOA 2025 Restratiification – Mock Data for Testing

The plan will be, once all are satisfied with the new GAP_PRODUCTS schema and tables, to sunset the historic product tables in 2024 and proceed with only GAP_PRODUCTS for the 2024 post-survey stock assessment season.

- December 2023 - March 2024: Meeting between GAP and stock assessment groups in early December 2023 to update progress on the GAP_PRODUCTS testing phase. **Deadline for Comments and Feedback on GAP_PRODUCTS data structures is March 8, 2024.**
- September 2024: GAP will only release data products according to the new standard. Current, historical data product tables will be archived in a new schema called "**GAP_ARCHIVE**".

3.2. Previous updates

- September 2023: Provisional data product tables – CPUE, BIOMASS, SIZECOMP, and AGECOMP – as well as provisional support tables – AREA, STRATUM_GROUPS, METADATA_COLUMN, SPECIES_YEAR, SURVEY_DESIGN – are available in the GAP_PRODUCTS Oracle schema with updated 2023 GOA and EBS survey data.
 - Additionally, the inclusion of mock data for the under the new 2025 GOA stratified random survey (labeled in the GAP_PRODUCTS tables as YEAR 2025) will provide stock authors with the opportunity to interact with data from the new survey design to be implemented in 2025.

3. News

- Provisional AKFIN and FOSS tables are also available in the GAP_PROD-UCTS Oracle schema. These include: AKFIN_AGECOMP, AKFIN_AREA, AKFIN BIOMASS, AKFIN_CATCH, AKFIN_CPUE, AKFIN_CRUISE, AKFIN_HAUL, AKFIN_LENGTH, AKFIN_METADATA_COLUMN, AKFIN_SIZECOMP, AKFIN_SPECIMEN, AKFIN_SURVEY DESIGN, AKFIN_STRATUM_GROUPS, FOSS_CATCH, FOSS_CPUE_PRESONLY, FOSS_HAUL, and FOSS_TAXON_GROUP.
- May 2023: Release of new, draft, standard data product tables, including restratified GOA data. Stock assessment authors will have the opportunity to explore differences between datasets, test workflows, and provide comments and issues during summer 2023.
- February 2023: Decision was made to include the mock restratified GOA data with the development of the new consolidated standard data products.
- December 2022: GAP and SSMA discuss integration of the restratification of the GOA survey design into standard data products.
 - Stock assessors requested a "dry run" test to work with new mock restratified GOA survey data before implementation of the new survey design.
 - This prompted the postponement of the restratified GOA design to 2025.
- October 2022: The data processes and index computation working group convened to address the development of standard survey data products (e.g., biomass/abundance, size composition, age composition, CPUE).
 - Index Computation Working Group: consolidation of index computation methods between the Bering Sea and AI-GOA regions.
 - Data Processes Working Group: consolidation, clean up, and reorganization of survey oracle schemata, tables, and other data for all surveys.

Part II.

GAP Production Data

Data Description

The Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC) conducts fisheries-independent bottom trawl surveys to monitor the condition of the demersal fish and crab stocks of Alaska. These data are developed to describe the temporal distribution and abundance of commercially and ecologically important groundfish species, examine the changes in the species composition of the fauna over time and space, and describe the physical environment of the groundfish habitat.

Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of NOAA, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested. These data are compiled and approved annually after each summer survey season. The data from previous years are unlikely to change substantially once published. Some survey data are excluded, such as non-standard stations, surveys completed in earlier years using different/non-standard gear, and special tows and non-standard data collections.

Data Creation

Data Creation

These data are created using the gapindex R package.

4. Data description

4.1. Data usage

These tables were created by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). There are legal restrictions on access to the data. These data are not intended for public dissemination and should not be shared without the explicit written consent of the data managers and owners (NOAA Fisheries). The GitHub repository for the scripts that created this code can be found at https://github.com/afsc-gap-products/gap_products. For more information about codes used in the tables, please refer to the survey code books. These data were last updated September 10, 2023.

4.2. Data tables

4.2.1. AGECOMP

Region-level age compositions by sex/length bin.

Number of rows: 552856

Number of columns: 9

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AGE

Age bin of taxon

4. Data description

year

NUMBER(38,0)

Age bin of a taxon in years estimated by the age comp estimate.

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

LENGTH_MM_MEAN

Mean length at age weighted by numbers at length

numeric

NUMBER(38,3)

Mean length estimated in age comp estimate.

LENGTH_MM_SD

standard deviation of length at age weighted by numbers at length

numeric

NUMBER(38,3)

Variance of mean length estimated in age comp estimate.

POPULATION_COUNT

Estimated Population

numeric

NUMBER(38,6)

The estimated population caught in the survey for a species, group, or total for a given survey.

SEX

Sex of a specimen

4. Data description

ID code

NUMBER(38,0)

Sex of a specimen where "1" = "Male", "2" = "Female", "3" = Unsexed.

SPECIES_CODE

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

4. Data description

4.2.2. AREA

[There is currently no description for this table.]

Number of rows: 443

Number of columns: 10

Oracle data type

Column description

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

AREA_KM2

Area (km²)

kilometers squared

NUMBER(38,3)

Area in thousands of square kilometers.

AREA_NAME

Area ID Name

text

VARCHAR2(4000 BYTE)

Descriptive name of each AREA_ID. These names often identify the region, depth ranges, or other regional information for the area ID.

DEPTH_MAX_M

4. Data description

Area ID Maximum Depth (m)

meters

NUMBER(38,3)

Maximum depth (meters) of the area covered by AREA_ID.

DEPTH_MIN_M

Area ID Minimum Depth (m)

meters

NUMBER(38,3)

Minimum depth (meters) of the area covered by AREA_ID.

DESCRIPTION

Description

text

VARCHAR2(4000 BYTE)

Description of row observation.

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

4.2.3. BIOMASS

Stratum/subarea/region-level mean CPUE (weight and numbers), total biomass, and total abundance with associated variances.

Number of rows: 4589761

Number of columns: 16

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

BIOMASS_MT

4. Data description

Estimated Biomass

numeric

NUMBER(38,6)

The estimated biomass caught in the survey for a species, group, or total for a given survey.

BIOMASS_VAR

Estimated Biomass Variance

numeric

NUMBER(38,6)

The estimated biomass variance caught in the survey for a species, group, or total for a given survey.

CPUE_KGKM2_MEAN

Mean Weight CPUE

kilograms per kilometers squared

NUMBER(38,6)

The mean of catch weight (kilograms) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

CPUE_KGKM2_VAR

Variance of the Mean Weight CPUE

kilograms per kilometers squared

NUMBER(38,6)

The variance of mean of catch weight (kilograms) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

CPUE_NOKM2_MEAN

Mean Numeric CPUE

count per kilometers squared

NUMBER(38,6)

The mean of catch count (number) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

4. Data description

CPUE_NOKM2_VAR

Variance of the Mean Numeric CPUE

count per kilometers squared

NUMBER(38,6)

The variance of mMean of catch count (number) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

N_COUNT

Hauls with taxon counts

numeric

NUMBER(38,0)

Total number of hauls with positive taxon counts used in calculation.

N_HAUL

Valid hauls

numeric

NUMBER(38,0)

Total number of valid hauls used in calculation.

N_LENGTH

Hauls with taxon lengths

numeric

NUMBER(38,0)

Total number of hauls with taxon length data used in calculation.

N_WEIGHT

Hauls with catch

numeric

NUMBER(38,0)

Total number of hauls with positive catch/weighed taxon data used in calculation.

POPULATION_COUNT

Estimated Population

4. Data description

numeric

NUMBER(38,6)

The estimated population caught in the survey for a species, group, or total for a given survey.

POPULATION_VAR

Estimated Population Variance

numeric

NUMBER(38,6)

The estimated population variance caught in the survey for a species, group, or total for a given survey.

SPECIES_CODE

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

4. Data description

4.2.4. CPUE

Haul-level zero-filled weight and numerical catch-per-unit-effort.

Number of rows: 37834687

Number of columns: 7

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_SWEPT_KM2

Area Swept (km)

kilometers

NUMBER(38,6)

The area the net covered while the net was fishing (kilometers squared), defined as the distance fished times the net width.

COUNT

Taxon Count

count, whole number resolution

NUMBER(38,0)

Total number of individuals caught in haul by taxon, represented in whole numbers used in calculation.

CPUE_KGKM2

Weight CPUE (kg/km²)

kilograms per kilometers squared

NUMBER(38,6)

Catch weight (kilograms) divided by area (squared kilometers) swept by the net.

CPUE_NOKM2

4. Data description

Number CPUE (no/km²)

count per kilometers squared

NUMBER(38,6)

Catch number (in number of organisms) per area (squared kilometers) swept by the net.

HAULJOIN

Haul ID

ID code

NUMBER(38,0)

This is a unique numeric identifier assigned to each (vessel, cruise, and haul) combination.

SPECIES_CODE

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

WEIGHT_KG

Taxon Weight (kg)

kilograms

NUMBER(38,3)

Weight (thousandths of a kilogram) of individuals in a haul by taxon.

4. Data description

4.2.5. SURVEY DESIGN

[There is currently no description for this table.]

Number of rows: 126

Number of columns: 3

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

4. Data description

4.2.6. METADATA_TABLE

[There is currently no description for this table.]

Number of rows: 8

Number of columns: 3

Column name from data

Descriptive column Name

Oracle data type

Column description

METADATA_SENTENCE

Sentence

text

VARCHAR2(255 BYTE)

Table metadata sentence.

METADATA_SENTENCE_NAME

Metadata sentence name

text

VARCHAR2(255 BYTE)

Name of table metadata sentence.

METADATA_SENTENCE_TYPE

Sentence type

text

VARCHAR2(255 BYTE)

Type of sentence to have in table metadata.

4. Data description

4.2.7. STRATUM_GROUPS

[There is currently no description for this table.]

Number of rows: 774

Number of columns: 4

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

STRATUM

Stratum ID

ID code

NUMBER(10,0)

4. Data description

RACE database statistical area for analyzing data. Strata were designed using bathymetry and other geographic and habitat-related elements. The strata are unique to each survey series. Stratum of value 0 indicates experimental tows.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

4.2.8. SIZECOMP

[There is currently no description for this table.]

Number of rows: 3130543

Number of columns: 7

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

LENGTH_MM

Length of a specimen

4. Data description

millimeters

NUMBER(10,0)

Length of a specimen in millimeters.

POPULATION_COUNT

Estimated Population

numeric

NUMBER(38,6)

The estimated population caught in the survey for a species, group, or total for a given survey.

SEX

Sex of a specimen

ID code

NUMBER(38,0)

Sex of a specimen where "1" = "Male", "2" = "Female", "3" = Unsexed.

SPECIES_CODE

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

4. Data description

year

NUMBER(10,0)

Year the survey was conducted in.

5. gapindex R package

Code to generate design-based catch-per-unit-effort (CPUE), indices of abundance, biomass, and size and age compositions from survey data is available from <https://github.com/afsc-gap-products/gapindex>.

Part III.

AKFIN

The Alaska Fisheries Information Network

These data are used directly by stock assessors and are provided to The [Alaska Fisheries Information Network (AKFIN)].

The Alaska Fisheries Information Network

The Alaska Fisheries Information Network (AKFIN) is a regional program that consolidates and supports the collection, processing, analysis, and reporting of fisheries statistics for North Pacific and Alaskan fisheries. AKFIN integrates this information into a single data management system using consistent methods and standardized formats. The Network then reports this information on its website, in various publications, and to researchers. The resulting data enables fishery managers, scientists, and associated agencies to supervise fisheries resources more effectively and efficiently.

If you are an AFSC employee with access to data through our internal database Oracle server, use this guide to access our data. If not, reach out to AKFIN for a user account.

Cite this data

Use the below bibtext citations, as cited in our group's citation repository for citing the data created and maintained in this repo (Alaska Fisheries Information Network (AKFIN), 2023). Add "note = {Accessed: mm/dd/yyyy}" to append the day this data was accessed.

```

6. Data description

6.1. Data Description

[OUTDATED] AKFIN Answers <https://akfin.psmfc.org/akfin-answers/> is an Oracle BI tool used for distributing data to stock assessors and other users. Usernames and passwords are distinct from direct akfin database credentials (though they may be identical). RACE data on the AKFIN Answers stock assessment dashboard is located on the “RACE Survey” tab for groundfish and the “Crab” tab for crab surveys. More detailed descriptions of each report are included within that report.

6.2. Data Tables

AGE

Age bin of taxon

year

NUMBER(38,0)

6. Data description

Age bin of a taxon in years estimated by the age comp estimate.

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

LENGTH_MM_MEAN

Mean length at age weighted by numbers at length

numeric

NUMBER(38,3)

Mean length estimated in age comp estimate.

LENGTH_MM_SD

standard deviation of length at age weighted by numbers at length

numeric

NUMBER(38,3)

Variance of mean length estimated in age comp estimate.

POPULATION_COUNT

Estimated Population

numeric

NUMBER(38,6)

The estimated population caught in the survey for a species, group, or total for a given survey.

SEX

Sex of a specimen

ID code

NUMBER(38,0)

6. Data description

Sex of a specimen where "1" = "Male", "2" = "Female", "3" = Unsexed.

SPECIES_CODE

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

AREA_ID

Area ID code

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

AREA_KM2

Area (km²)

kilometers squared

NUMBER(38,3)

Area in thousands of square kilometers.

AREA_NAME

Area ID Name

text

VARCHAR2(4000 BYTE)

Descriptive name of each AREA_ID. These names often identify the region, depth ranges, or other regional information for the area ID.

DEPTH_MAX_M

Area ID Maximum Depth (m)

meters

NUMBER(38,3)

Maximum depth (meters) of the area covered by AREA_ID.

DEPTH_MIN_M

Area ID Minimum Depth (m)

meters

NUMBER(38,3)

Minimum depth (meters) of the area covered by AREA_ID.

6. Data description

DESCRIPTION

Description

text

VARCHAR2(4000 BYTE)

Description of row observation.

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

BIOMASS_MT

Estimated Biomass

numeric

NUMBER(38,6)

The estimated biomass caught in the survey for a species, group, or total for a given survey.

BIOMASS_VAR

Estimated Biomass Variance

numeric

NUMBER(38,6)

The estimated biomass variance caught in the survey for a species, group, or total for a given survey.

CPUE_KGKM2_MEAN

6. Data description

Mean Weight CPUE

kilograms per kilometers squared

NUMBER(38,6)

The mean of catch weight (kilograms) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

CPUE_KGKM2_VAR

Variance of the Mean Weight CPUE

kilograms per kilometers squared

NUMBER(38,6)

The variance of mean of catch weight (kilograms) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

CPUE_NOKM2_MEAN

Mean Numeric CPUE

count per kilometers squared

NUMBER(38,6)

The mean of catch count (number) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

CPUE_NOKM2_VAR

Variance of the Mean Numeric CPUE

count per kilometers squared

NUMBER(38,6)

The variance of mMean of catch count (number) divided by area (squared kilometers) swept by the net used in design-based indicie calculation.

N_COUNT

Hauls with taxon counts

numeric

NUMBER(38,0)

Total number of hauls with positive taxon counts used in calculation.

N_HAUL

6. Data description

Valid hauls

numeric

NUMBER(38,0)

Total number of valid hauls used in calculation.

N_LENGTH

Hauls with taxon lengths

numeric

NUMBER(38,0)

Total number of hauls with taxon length data used in calculation.

N_WEIGHT

Hauls with catch

numeric

NUMBER(38,0)

Total number of hauls with positive catch/weighed taxon data used in calculation.

POPULATION_COUNT

Estimated Population

numeric

NUMBER(38,6)

The estimated population caught in the survey for a species, group, or total for a given survey.

POPULATION_VAR

Estimated Population Variance

numeric

NUMBER(38,6)

The estimated population variance caught in the survey for a species, group, or total for a given survey.

SPECIES_CODE

Taxon Code

6. Data description

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

SURVEY_DEFINITION_ID

Survey ID

Longitude (one hundred thousandth of a decimal degree) of the start of the haul.

NET_HEIGHT_M

Net Height (m)

6. Data description

meters

NUMBER(38,1)

Measured or estimated distance (meters) between footrope and headrope of the trawl.

NET_MEASURED

Net measured during haul

logical

NA

Logical, describing if the net was measured (TRUE) or not (FALSE) by wheelhouse and marport programs during the haul.

NET_WIDTH_M

Net Width (m)

meters

NUMBER(38,1)

Measured or estimated distance (meters) between wingtips of the trawl.

PERFORMANCE

Haul Performance Code

category

NUMBER(38,0)

This denotes what, if any, issues arose during the haul. For more information, review the code books.

STATION

Station ID

ID code

VARCHAR2(255 BYTE)

Alpha-numeric designation for the station established in the design of a survey.

STRATUM

Stratum ID

6. Data description

ID code

NUMBER(10,0)

RACE database statistical area for analyzing data. Strata were designed using bathymetry and other geographic and habitat-related elements. The strata are unique to each survey series. Stratum of value 0 indicates experimental tows.

SURFACE_TEMPERATURE_C

Surface Temperature (Degrees Celsius)

degrees Celsius

NUMBER(38,1)

Surface temperature (tenths of a degree Celsius); NA indicates removed or missing values.

VESSEL_ID

Vessel ID

ID code

NUMBER(38,0)

ID number of the vessel used to collect data for that haul. The column 'vessel_id' is associated with the 'vessel_name' column. Note that it is possible for a vessel to have a new name but the same vessel id number. For a complete list of vessel ID codes, review the code books.

WIRE_LENGTH_M

Trawl wire length

meters

NUMBER(38,0)

Length of wire deployed during a given haul in meters.

NA

NA

STRATUM

Stratum ID

6. Data description

ID code

NUMBER(10,0)

RACE database statistical area for analyzing data. Strata were designed using bathymetry and other geographic and habitat-related elements. The strata are unique to each survey series. Stratum of value 0 indicates experimental tows.

VESSEL_ID

Vessel ID

ID code

NUMBER(38,0)

ID number of the vessel used to collect data for that haul. The column 'vessel_id' is associated with the 'vessel_name' column. Note that it is possible for a vessel to have a new name but the same vessel id number. For a complete list of vessel ID codes, review the code books.

WEIGHT_G

6.2.12. AKFIN_STRATUM_GROUPS

Number of rows: 774

Number of columns: 4

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_ID

Area ID code

6. Data description

ID code

NUMBER(38,0)

Area ID code for each statistical area used to produce production estimates (e.g., biomass, population, age comps, length comps). Each area ID is unique within each survey.

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

STRATUM

Stratum ID

ID code

NUMBER(10,0)

RACE database statistical area for analyzing data. Strata were designed using bathymetry and other geographic and habitat-related elements. The strata are unique to each survey series. Stratum of value 0 indicates experimental tows.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

6. Data description

6.2.13. AKFIN_SURVEY DESIGN

Number of rows: 126

Number of columns: 3

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

DESIGN_YEAR

Design year

year

NUMBER(10,0)

The year the survey area stratum (e.g., statistical stratum, summary area, region) was implemented in.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

7. Accessing Data

7.1. Access data via Oracle (AFSC only)

AFSC Oracle users can access the database via SQL developer to view and pull the production data directly from the GAP_PRODUCTS Oracle schema. The user can also use SQL developer to view and pull the GAP Products data directly from the GAP_PRODUCTS Oracle schema.

7.1.1. Connect to Oracle from R

Many users will want to access the data from Oracle using R. The user will need to install the RODBC R package and ask OFIS (IT) connect R to Oracle. Then, use the following code in R to establish a connection from R to Oracle:

Here, the user can establish the oracle connection by entering their username and password in the channel `<- gapindex::oracle_connect()` function. Never save usernames or passwords in scripts that may be intentionally or unintentionally shared with others. If no username and password is entered in the function, pop-ups will appear on the screen asking for the username and password.

7.2. Data SQL Query Examples:

7.2.1. Ex. 0: Select all data from a table

You can download all of the tables locally using a variation of the code below. Once connected, pull and save the tables of interest into the R environment.

7. Accessing Data

```
locations <- c(
  "GAP_PRODUCTS.AKFIN_AGECOMP",
  "GAP_PRODUCTS.AKFIN_AREA",
  "GAP_PRODUCTS.AKFIN_BIOMASS",
  "GAP_PRODUCTS.AKFIN_CATCH",
  "GAP_PRODUCTS.AKFIN_CPUE",
  "GAP_PRODUCTS.AKFIN_CRUISE",
  "GAP_PRODUCTS.AKFIN_HAUL",
  "GAP_PRODUCTS.AKFIN_LENGTH",
  "GAP_PRODUCTS.AKFIN_METADATA_COLUMN",
  "GAP_PRODUCTS.AKFIN_SIZECOMP",
  "GAP_PRODUCTS.AKFIN_SPECIMEN",
  "GAP_PRODUCTS.AKFIN_STRATUM_GROUPS",
  "GAP_PRODUCTS.AKFIN_SURVEY_DESIGN",
  "GAP_PRODUCTS.AKFIN_TAXONOMY"
)

for (i in 1:length(locations)) {
  print(locations[i])
  a <- RODBC::sqlQuery(channel, paste0("SELECT * FROM ", locations[i]))
  write.csv(x = a, file = here::here("data", paste0(locations[i], ".csv")))
}
```

7.2.2. Ex. 1: GOA Pacific Ocean perch biomass and abundance

Biomass and abundance for Pacific Ocean perch from 1990 – 2023 for the western/central/eastern GOA management areas as well as for the entire region.

```
dat <- RODBC::sqlQuery(channel = channel,
                       query =

8. Access API data using R

Use the below function to pull AKFIN data through AKFIN's API.

```
# load libraries
library(dplyr)
library(magrittr)
library(httr)
library(flextable)

# tell R to not use scientific notation
options(scipen=999)

# function for pulling data from the api using the httr package
get_gap_biomass<-function(area_id, species_code) {
  # paste(... collapse=",") puts commas between vector elements
  area_id <- paste(area_id, collapse = ",")
  species_code <- paste(species_code, collapse = ",")
  # httr code, parameters are after the '?'
  httr::content(
    httr::GET(paste0("https://apex.psmfc.org/akfin/data_marts/akmp/gap_biomass?area_id=",
                     area_id,
                     "&species_code=",
                     species_code)),
    type = "application/json") %>%
    # convert to data frame
    bind_rows()
}
```

8.1. Ex. 1: Load lingcod data

8. Access API data using R

```
lingcod_biomass <- get_gap_biomass(area_id=c(40, 41), species_code=21910)
flextable::flextable(head(lingcod_biomass)) %>%
  flextable::theme_zebra()
```

Part IV.

Public Data (FOSS)

The final, validated survey data are publicly accessible soon after surveys are completed on the Fisheries One Stop Shop (FOSS) platform. This data includes catch, haul, and environmental data collected at each station. On the FOSS data platform, users can interactively select, view, and download data. Descriptive documentation and user-examples are available on the metadata page.

This data contains all of the catch, environmental, and haul data from the fisheries-independent Groundfish and Shellfish Assessment Program surveys in the Bering Sea, Aleutian Islands, and Gulf of Alaska. This data is sought after by the general public, private entities, and NOAA partners alike, including tribal organizations, K-12 classrooms, academic institutions, for-profit groups, and non-profit groups. This data is compiled and approved once a year after each summer survey season and is available for open access.

Part V.

9. Data description

The Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC) conducts fisheries-independent bottom trawl surveys to monitor the condition of the demersal fish and crab stocks of Alaska. These data are developed to describe the temporal distribution and abundance of commercially and ecologically important groundfish species, examine the changes in the species composition of the fauna over time and space, and describe the physical environment of the groundfish habitat.

There are no legal restrictions on access to the data. They reside in the public domain and can be freely distributed. Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of NOAA, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested. These data are compiled and approved annually after each summer survey season. The data from previous years are unlikely to change substantially once published.

These data are zero-filled (presence and absence) observations from surveys conducted on fishing vessels. These surveys monitor trends in distribution and abundance of groundfish, crab, and bottom-dwelling species in Alaska's marine ecosystems. These data include estimates of catch-per-unit-effort (CPUE) for all identified species for index stations. Some survey data are excluded, such as non-standard stations, surveys completed in earlier years using different/non-standard gear, and special tows and non-standard data collections.

Though not included in the public data, these surveys also collect oceanographic and environmental data, and biological data such as length, weight, stomach contents (to learn more about diet), otoliths (fish ear bones to learn about age), and tissue samples for genetic analysis, all of which can be shared upon special request. Also not included in the public data are estimated biomass (average total weight of all fish and crabs sampled) of crabs and groundfish that support the creation of annual stock assessments.

9. Data description

9.1. Data tables

9.1.1. FOSS_CATCH

Number of rows: 42281918

Number of columns: 12

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

COMMON_NAME

Taxon Common Name

text

VARCHAR2(255 BYTE)

The common name of the marine organism associated with the 'scientific_name' and 'species_code' columns. For a complete species list, review the code books.

COUNT

Taxon Count

count, whole number resolution

NUMBER(38,0)

Total number of individuals caught in haul by taxon, represented in whole numbers used in calculation.

CPUE_KGKM2

Weight CPUE (kg/km²)

kilograms per kilometers squared

NUMBER(38,6)

Catch weight (kilograms) divided by area (squared kilometers) swept by the net.

CPUE_NOKM2

9. Data description

Number CPUE (no/km²)

count per kilometers squared

NUMBER(38,6)

Catch number (in number of organisms) per area (squared kilometers) swept by the net.

HAULJOIN

Haul ID

ID code

NUMBER(38,0)

This is a unique numeric identifier assigned to each (vessel, cruise, and haul) combination.

ID_RANK

Lowest taxonomic rank

text

VARCHAR2(255 BYTE)

Lowest taxonomic rank of a given species entry.

ITIS

ITIS Taxonomic Serial Number

ID code

NUMBER(38,0)

Species code as identified in the Integrated Taxonomic Information System (<https://it.is.gov/>).

SCIENTIFIC_NAME

Taxon Scientific Name

text

VARCHAR2(255 BYTE)

The scientific name of the organism associated with the 'common_name' and 'species_code' columns. For a complete taxon list, review the code books.

SPECIES_CODE

9. Data description

Taxon Code

ID code

NUMBER(38,0)

The species code of the organism associated with the 'common_name' and 'scientific_name' columns. For a complete species list, review the code books.

TAXON_CONFIDENCE

Taxon Confidence Rating

category

VARCHAR2(255 BYTE)

Confidence in the ability of the survey team to correctly identify the taxon to the specified level, based solely on identification skill (e.g., not likelihood of a taxon being caught at that station on a location-by-location basis). Quality codes follow: '**HighModerateLow**

WEIGHT_KG

Taxon Weight (kg)

kilograms

NUMBER(38,3)

Weight (thousandths of a kilogram) of individuals in a haul by taxon.

WORMS

World Register of Marine Species Taxonomic Serial Number

ID code

NUMBER(38,0)

Species code as identified in the World Register of Marine Species (WoRMS) (<https://www.marinespecies.org/>).

9. Data description

9.1.2. FOSS_HAUL

Number of rows: 32510

Number of columns: 27

Column name from data

Descriptive column Name

Units

Oracle data type

Column description

AREA_SWEPT_KM2

Area Swept (km)

kilometers

NUMBER(38,6)

The area the net covered while the net was fishing (kilometers squared), defined as the distance fished times the net width.

BOTTOM_TEMPERATURE_C

Bottom Temperature (Degrees Celsius)

degrees Celsius

NUMBER(38,1)

Bottom temperature (tenths of a degree Celsius); NA indicates removed or missing values.

CRUISE

Cruise ID

ID code

NUMBER(38,0)

This is a six-digit number identifying the cruise number of the form: YYYY99 (where YYYY = year of the cruise; 99 = 2-digit number and is sequential; 01 denotes the first cruise that vessel made in this year, 02 is the second, etc.).

CRUISEJOIN

9. Data description

Cruise ID

ID code

NUMBER(38,0)

This is a unique numeric identifier assigned to each survey, vessel, and year combination.

DATE_TIME

Date and Time

MM/DD/YYYY HH::MM

DATE

The date (MM/DD/YYYY) and time (HH:MM) of the haul.

DEPTH_M

Depth (m)

degrees Celsius

NUMBER(38,1)

Bottom depth (tenths of a meter).

DISTANCE_FISHED_KM

Distance Fished (km)

degrees Celsius

NUMBER(38,3)

Distance the net fished (thousandths of kilometers).

DURATION_HR

Tow Duration (decimal hr)

hours

NUMBER(38,1)

This is the elapsed time between start and end of a haul (decimal hours).

HAUL

Haul Number

ID code

9. Data description

NUMBER(38,0)

This number uniquely identifies a sampling event (haul) within a cruise. It is a sequential number, in chronological order of occurrence.

HAULJOIN

Haul ID

ID code

NUMBER(38,0)

This is a unique numeric identifier assigned to each (vessel, cruise, and haul) combination.

LATITUDE_DD_END

End Latitude (decimal degrees)

decimal degrees

NUMBER(38,6)

Latitude (one hundred thousandth of a decimal degree) of the end of the haul.

LATITUDE_DD_START

Start Latitude (decimal degrees)

decimal degrees

NUMBER(38,6)

Latitude (one hundred thousandth of a decimal degree) of the start of the haul.

LONGITUDE_DD_END

End Longitude (decimal degrees)

decimal degrees

NUMBER(38,6)

Longitude (one hundred thousandth of a decimal degree) of the end of the haul.

LONGITUDE_DD_START

Start Longitude (decimal degrees)

decimal degrees

NUMBER(38,6)

9. Data description

Longitude (one hundred thousandth of a decimal degree) of the start of the haul.

NET_HEIGHT_M

Net Height (m)

meters

NUMBER(38,1)

Measured or estimated distance (meters) between footrope and headrope of the trawl.

NET_WIDTH_M

Net Width (m)

meters

NUMBER(38,1)

Measured or estimated distance (meters) between wingtips of the trawl.

PERFORMANCE

Haul Performance Code

category

NUMBER(38,0)

This denotes what, if any, issues arose during the haul. For more information, review the code books.

SRVY

Survey

text abbreviated

VARCHAR2(255 BYTE)

Abbreviated survey names. The column 'srvy' is associated with the 'survey' and 'survey_id' columns. Northern Bering Sea (NBS), Southeastern Bering Sea (EBS), Bering Sea Slope (BSS), Gulf of Alaska (GOA), Aleutian Islands (AI).

STATION

Station ID

ID code

VARCHAR2(255 BYTE)

9. Data description

Alpha-numeric designation for the station established in the design of a survey.

STRATUM

Stratum ID

ID code

NUMBER(10,0)

RACE database statistical area for analyzing data. Strata were designed using bathymetry and other geographic and habitat-related elements. The strata are unique to each survey series. Stratum of value 0 indicates experimental tows.

SURFACE_TEMPERATURE_C

Surface Temperature (Degrees Celsius)

degrees Celsius

NUMBER(38,1)

Surface temperature (tenths of a degree Celsius); NA indicates removed or missing values.

SURVEY

Survey Name

text

VARCHAR2(255 BYTE)

Name and description of survey. The column 'survey' is associated with the 'srvy' and 'survey_id' columns.

SURVEY_DEFINITION_ID

Survey ID

ID code

NUMBER(38,0)

This number uniquely identifies a survey. Name and description of survey. The column 'survey_id' is associated with the 'srvy' and 'survey' columns. For a complete list of surveys, review the code books.

SURVEY_NAME

NA

9. Data description

NA

NA

NA

VESSEL_ID

Vessel ID

ID code

NUMBER(38,0)

ID number of the vessel used to collect data for that haul. The column 'vessel_id' is associated with the 'vessel_name' column. Note that it is possible for a vessel to have a new name but the same vessel id number. For a complete list of vessel ID codes, review the code books.

VESSEL_NAME

Vessel Name

text

VARCHAR2(255 BYTE)

Name of the vessel used to collect data for that haul. The column 'vessel_name' is associated with the 'vessel_id' column. Note that it is possible for a vessel to have a new name but the same vessel id number. For a complete list of vessel ID codes, review the code books.

YEAR

Year

year

NUMBER(10,0)

Year the survey was conducted in.

10. Using the API

10.1. Select and filter

Select, filter, and package this and other NOAA Fisheries data from the Fisheries One Stop Shop (FOSS) platform. A user guide for the FOSS platform can be found here. To begin a report, select options from the boxes what you need data for.

For a given box, select one or a few options from the “options box” (list on the left) to query by highlighting them. To select multiple options, hold down the CTRL key while clicking on the options of interest, or click and drag down the list. Once the options you wish to be included in your query are highlighted, click the right-pointing arrow (>) to move them into the “selection box” (list on the right). If you accidentally select an option that you do not want to query, simply select the unwanted option from the selection box and click the left-pointing arrow (<).

If you wish to select all options from the options box and send them to the selection box, simply click the double right-pointing arrow (>>). If you want to unselect all options from the selection box, use the double left-pointing arrow (<<) or the reset icon.

To find a specific species or group more quickly you can use the `Search Species` option to quickly narrow the options. Search for parts of species common names in the `Search Species` box by entering a term and clicking the `search` button. The platform will return a shorter list in the `Species` options box of only species that contain a match to that search term.

Use the `Reset All Parameters` button to reset all parameters for entire form.

Filter options:

- **Survey:** Each survey has different in design, time series, and history. More information on each survey and their designs can be found in our annual data reports.
- **Year:** Surveys are not conducted in all years, so only data from the years for which the survey was conducted will be returned.

10. Using the API

The screenshot shows the AFSC Groundfish and Crab Assessment Program Bottom Trawl Surveys data interface. At the top, the NOAA Fisheries logo is visible. The main title "AFSC Groundfish and Crab Assessment Program" and "Bottom Trawl Surveys" is displayed above a banner image of a fish swimming in water. Below the title, a message states "Survey data also available through API". On the left, a sidebar menu includes links for FUS Report, Landings, Foreign Trade, Top US Ports, Processed Products, Per Capita Consumption, Supply, USCG Vessels, AFSC GAP Survey (which is selected), AFSC GAP Metadata, Partners, Metadata and Caveats, Frequently Asked Questions, Quick Start Guide, and Comments. The main content area has a "Data Caveats" section explaining survey details and a "Parameters" section for selecting survey, year, species, and data format. A "RUN REPORT" button is at the bottom.

Data Caveats

The Resource Assessment and Conservation Engineering (RACE) Division Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC) conducts fisheries-independent bottom trawl surveys to assess the populations of demersal fish and crab stocks of Alaska. Data presented here are presence-only (non-zero) observations from those surveys and therefore CANNOT be aggregated. Please reach out to survey team leads listed in the metadata if clarification is needed.

Selecting all surveys for all years and all species will result in a dataset of approximately 1 million rows and might crash the page. If the entire dataset is required, please use the API or let us know using the Comments page and we'll send the data to you directly.

Parameters

Survey: Aleutian Islands Bottom Trawl Survey, Eastern Bering Sea Slope Bottom Trawl Survey, Eastern Bering Sea Crab/Groundfish Bottom Trawl Survey, Gulf of Alaska Bottom Trawl Survey, Northern Bering Sea Crab/Groundfish Survey - Eastern Bering Sea Shelf S

Year: 2022, 2021, 2019, 2018, 2017, 2016, 2015, 2014

Species: Abalone Jingle, Abietinaria, Abyssal Crangon, Acanthascus, Acantholithodes, Achanax johnsoni, Acoel Turbellarian, Acteocina

Search Species: [?](#)

Search [Reset All Parameters](#)

Data Format: All Data Fields, Catch Data: All Units, Catch Data: Hectares, Catch Data: Square Thousand km, Catch Data: Square km, Haul Data

[RUN REPORT](#)

Figure 10.1.: AFSC Groundfish and Crab Assessment Program Bottom Trawl Survey data interface on the Fisheries One Stop Shop platform.

10. Using the API

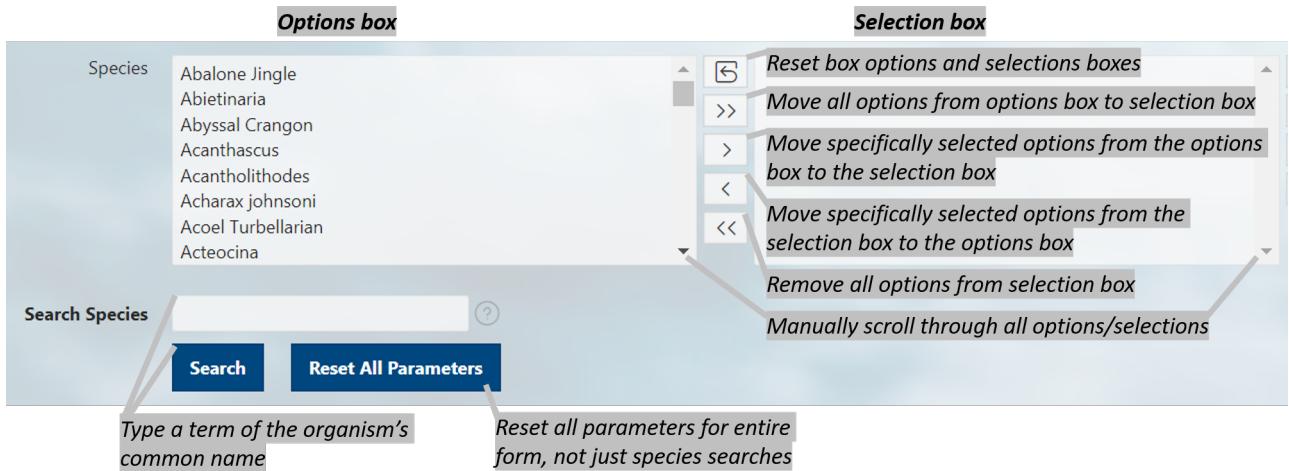

Figure 10.2.: Diagram of selection and search tools available on the FOSS platoform.

- **Species:** Common name of all species ever encountered in the survey. Find more information about these species in our survey code books.

In this example, we'll select for 2022 eastern Bering Sea Pacific cod data. Here, we used the Search Species box to search for species with the term "cod" in their common names and selected "Pacific cod" from that shortened list.

10.2. Select data format

Select from the below radio list of pre-designed output tables. Once you run the report, the user can further specify filter data and select columns of interest. The tables below will only include data from the selections made in the previous step.

- All Data Fields: Presence and Absence (zero-filled): The most complete version of the data, including species, catch, haul, and environmental data. This data will include catch data for where species were caught and zeros for where the species were not caught. This is important for calculating catch-per-unit-effort data, preparing distribution plots (e.g., using the akgfmaps R package), and many statistical analyses.
- All Data Fields: Presence-only (non-zero): The second most complete version of the data, including species, catch, haul, and environmental data. However, this data only includes catch data for where species were caught and does

10. Using the API

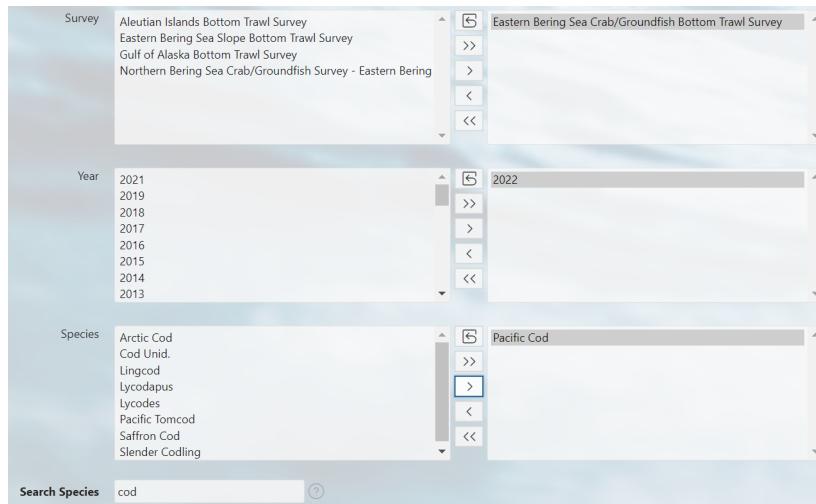

Figure 10.3.: Diagram of selection and search tools available on the FOSS platoform.

not include zeros for where the species were not caught. This will return smaller, more focused data and can be useful for quickly assessing how many species were caught or how many stations species were caught at.

- Catch data: Presence and Absence (zero-filled): This data set is similar to All Data Fields: Presence and Absence (zero-filled), but only includes catch and species data columns.
- Catch data: Presence-only (non-zero): This data set is similar to All Data Fields: Presence-only (non-zero), but only includes catch and species data columns.
- Haul Data: This data set only includes haul and environmental data collected from the survey. This data will only include one observation per haul event/station.

In this example, we'll select All Data Fields: Presence and Absence (zero-filled).

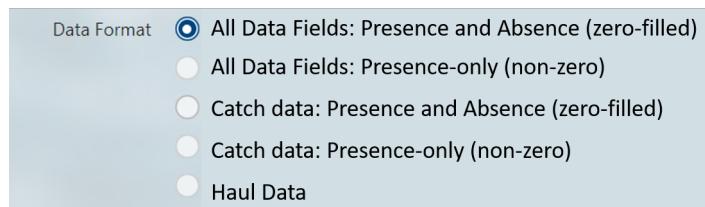

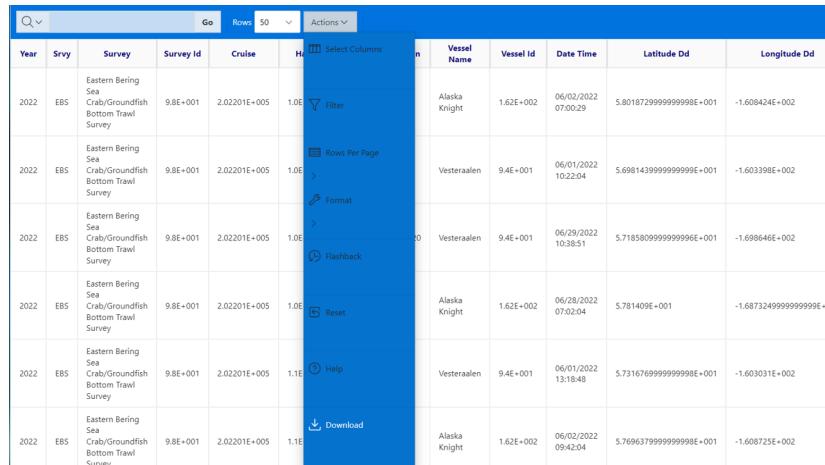

Figure 10.4.: Diagram of the pre-set data format options.

10. Using the API

10.3. Run report

Click the RUN REPORT button. Below the select and filter area, the results of your query will appear below the page in the format you selected. To change the format, make a different selection and run the report again. Further modifications to your results can be made by clicking on the Actions button above your data. Here you can download your data, select columns included in your results, and apply a variety of filters and mathematical tools.

The screenshot shows a data reporting interface with a table of survey results. A context menu is open over the last row of the table, listing options: Select Columns, Filter, Rows Per Page, Format, Flashback, Reset, Help, and Download. The table has columns for Year, Srvy, Survey, Survey Id, Cruise, and H. The data rows represent Eastern Bering Sea Crab/Groundfish Bottom Trawl Survey for various years and cruise numbers. The last row is highlighted with a blue background.

Year	Srvy	Survey	Survey Id	Cruise	H	Action Buttons	n	Vessel Name	Vessel Id	Date Time	Latitude Dd	Longitude Dd

11. Access API data using R

An application programming interface (API) is a way for two or more computer programs to communicate with each other.

More information about how to amend API links can be found [here](#). Useful introductions to using APIs in R can be found [here](#).

11.1. Ex. 1: Load the first 25 rows (default) of data

```
# install.packages(c("httr", "jsonlite"))
library(httr)
library(jsonlite)
library(dplyr)
# link to the API
api_link <- "https://apps-st.fisheries.noaa.gov/ods/foss/afsc_groundfish_survey/"

res <- httr::GET(url = api_link)
# res # Test connection
data <- jsonlite::fromJSON(base::rawToChar(res$content))
# names(data)
flextable::flextable(head(data$items, 3))
```

11. Access API data using R

yearsrvy	survey	survey_id	cruise	haul	stratum	station	vessel_name	vessel_
2,002AI	Aleutian Islands Bottom Trawl Survey	5.2E+001	2.00201E+000	6.05E+000	7.22E+002	307-63	Vesteraale	0.4E+0
2,002AI	Aleutian Islands Bottom Trawl Survey	5.2E+001	2.00201E+000	6.05E+000	7.22E+002	307-63	Vesteraale	0.4E+0
2,002AI	Aleutian Islands Bottom Trawl Survey	5.2E+001	2.00201E+000	6.05E+000	7.22E+002	307-63	Vesteraale	0.4E+0

11.2. Ex. 2: Load the first 10000 rows of data

```
# Not run because too big:  
res <- httr::GET(url = paste0(api_link, "?offset=0&limit=10000"))  
data <- jsonlite::fromJSON(base::rawToChar(res$content))  
print(paste0("rows: ", dim(data$items)[1], "; cols: ", dim(data$items)[2]))  
  
[1] "rows: 10000; cols: 36"
```

11.3. Ex. 3: Filter by Year

Show all the data greater than the year 2020.

11. Access API data using R

```
res <- httr::GET(url = paste0(api_link, '?q={"year":{$gt":2020}}'))  
data <- jsonlite::fromJSON(base::rawToChar(res$content))  
flextable::flextable(  
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")]) %>%  
  flextable::theme_zebra()
```

Table 11.2.: Ex. 3: Filter by Year.

year	srvy	stratum	species_code	cpue_kgkm2
2,022	AI	7.22E+002	1.0261E+01	6.7332582200000002E+002
2,022	AI	7.93E+002	8.054E+004	3.6112E-001
2,022	AI	7.22E+002	2.1347E+07	7.5809130500000003E+002

11.4. Ex. 4: Filter by species name

Show all the data where the product name contains pollock Please note that here the word pollock is case sensitive.

The notation for finding a string is to use % around it. Since % is a reserved character in a URL, you have to replace % with %25.

```
res <- httr::GET(  
  url = paste0(api_link, '?q={"common_name":{"$like":"%pollock%25"}'})')  
data <- jsonlite::fromJSON(base::rawToChar(res$content))  
flextable::flextable(  
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")]) %>%  
  flextable::theme_zebra()
```

11. Access API data using R

Table 11.3.: Ex. 4: Filter by species name.

yearsrvy	stratum	species_code	cpue_kgkm2
2,002AI	7.21E+002	2.174E+00	6.398909999999999E-001
2,002AI	7.22E+002	2.174E+00	4.7532226400000002E+002
2,002AI	7.22E+002	2.174E+00	1.0685806397E+004

11.5. Ex. 5: Combination of year and name filters

Show all the data where years > 2020 and the product name contains pollock

```
res <- httr::GET(
  url = paste0(api_link,
               '?q={"year": {"$gt": 2020}, "common_name": {"$like": "%pollock%"} }'))
data <- jsonlite::fromJSON(base:::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")]) %>%
  flextable::theme_zebra()
```

Table 11.4.: Ex. 5: Combination of year and name filters.

yearsrvy	stratum	species_code	cpue_kgkm2
2,022AI	7.22E+002	2.174E+00	2.2754334435000001E+004
2,022AI	7.93E+002	2.174E+00	4.8536315350000004E+003
2,022AI	7.21E+002	2.174E+00	7.235010325999996E+003

11.6. Ex. 6: Combination of year, srvy, stratum

Show all the data where year = 1989, srvy = "EBS", and stratum is not equal to 81

11. Access API data using R

```
res <- httr::GET(
  url = paste0(api_link, '?q={"year":1989,"srvy":"EBS","stratum":{"$ne":"81"}})')
data <- jsonlite::fromJSON(base::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2)]) %>%
  flextable::theme_zebra()
```

Table 11.5.: Ex. 6: Combination of year, srvy, stratum.

year	srvy	stratum	species_code	cpue_kgkm2
1,989	EBS	1.0E+001	4.05E+004	9.6200360000000007E+000
1,989	EBS	1.0E+001	6.8578E+004	62003600000000007E+000
1,989	EBS	1.0E+001	2.1313E+01	1.8179039E+001

11.7. Ex. 7: Visualize CPUE data in distribution map

Pacific cod catch-per-unit-effort estimates for NBS in 2021 and map constructed using akgfmaps.

```
# res <- httr::GET(
#   url = paste0(api_link, "?offset=0&limit=10000"),
#   query = list(year = 2021, srvy = "EBS", species_code = 30060))
res <- httr::GET(
  url = paste0(api_link, '?q={"year":2021,"srvy":"NBS","species_code":21720}'))
data_catch <- jsonlite::fromJSON(base::rawToChar(res$content))$items %>%
  dplyr::select(stratum, station, cpue_kgkm2)

# zero-fill data (imperfectly, but effective for this example)
res <- httr::GET(
  url = paste0(api_link, '?q={"year":2021,"srvy":"NBS"}offset=0&limit=10000'))
data_haul <- jsonlite::fromJSON(base::rawToChar(res$content))$items %>%
  dplyr::select(stratum, station, latitude_dd, longitude_dd) %>%
  dplyr::distinct()

data <- dplyr::left_join(data_haul, data_catch) %>%
```

11. Access API data using R

```
dplyr::mutate(cpue_kgkm2 = ifelse(is.na(cpue_kgkm2), 0, cpue_kgkm2),
  dplyr::across(dplyr::everything(), as.numeric))

flextable::flextable(data[1:3,]) %>%
  flextable::theme_zebra()
```

Table 11.6.: Ex. 7: Visualize CPUE data in distribution map.

stratum	station	latitude_dd	longitude_dd	cpue_kgkm2

```

11. Access API data using R

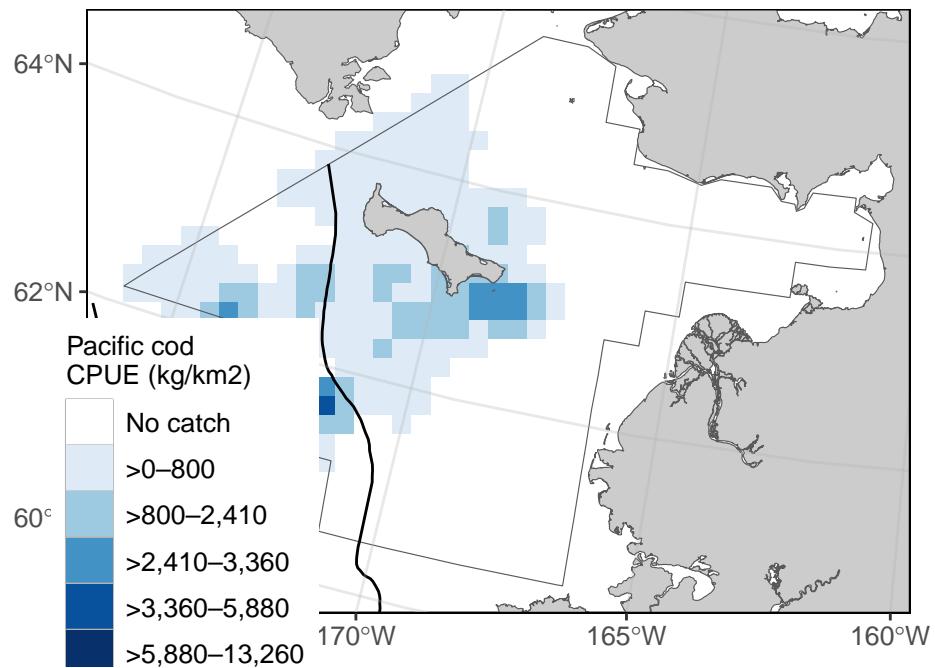

Figure 11.1.: Ex. 7: Visualize CPUE data in distribution map.

12. Access API data using Python

12.0.1. {afscgap} Library Installation

author: Sam Pottinger (sam.pottinger@berkeley.edu; GitHub::sampottinger)
date: May 13, 2023

The third-party afscgap Python package interfaces with FOSS to access AFSC GAP data. It can be installed via pip:

```
#The reticulate package provides a comprehensive set of tools for interoperability between
library(reticulate)
```

```
pip install afscgap
pip install git+https://github.com/SchmidtDSE/afscgap.git@main
```

For more information on installation and deployment, see the library documentation.

12.0.2. Basic query

This first example queries for Pacific glass shrimp (*Pasiphaea pacifica*) in the Gulf of Alaska in 2021. The library will automatically generate HTTP queries, converting from Python types to ORDS query syntax.

```
import afscgap

query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')

results = query.execute()
```

12. Access API data using Python

The `results` variable in this example is an iterator that will automatically perform pagination behind the scenes.

12.0.3. Iterating with a for loop

The easiest way to interact with results is a simple for loop. This next example determines the frequency of different catch per unit effort where Pacific glass shrimp were reported:

```
import afscgap

# Mapping from CPUE to count
count_by_cpue = {}

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
results = query.execute()

# Iterate through results and count
for record in results:
    cpue = record.get_cpue_weight(units='kg/ha')
    cpue_rounded = round(cpue)
    count = count_by_cpue.get(cpue_rounded, 0) + 1
    count_by_cpue[cpue_rounded] = count

# Print the result
print(count_by_cpue)
```

Note that, in this example, only records with Pacific glass shrimp are included (“presence-only” data). See zero catch inference below. In other words, it reports on CPUE only for hauls in which Pacific glass shrimp were recorded, excluding some hauls like those in which Pacific glass shrimp were not found at all.

12. Access API data using Python

12.0.4. Iterating with functional programming

A for loop is not the only option for iterating through results. List comprehensions and other functional programming methods can be used as well.

```
import statistics

import afscgap

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
results = query.execute()

# Get temperatures in Celsius
temperatures = [record.get_bottom_temperature(units='c') for record in results]

# Take the median
print(statistics.median(temperatures))
```

This example reports the median temperature in Celcius for when Pacific glass shrimp was reported.

12.0.5. Load into Pandas

The results from the afscgap package are serializable and can be loaded into other tools like Pandas. This example loads Pacific glass shrimp from 2021 Gulf of Alaska into a data frame.

```
import pandas

import afscgap

query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
```

12. Access API data using Python

```
results = query.execute()  
  
pandas.DataFrame(results.to_dicts())
```

Specifically, `to_dicts` provides an iterator over a dictionary form of the data that can be read into tools like Pandas.

12.0.6. Advanced filtering

Queries so far have focused on filters requiring equality but range queries can be built as well.

```
import afscgap  
  
# Build query  
query = afscgap.Query()  
query.filter_year(min_val=2015, max_val=2019)    # Note min/max_val  
query.filter_srvy(eq='GOA')  
query.filter_scientific_name(eq='Pasiphaea pacifica')  
results = query.execute()  
  
# Sum weight  
weights = map(lambda x: x.get_weight(units='kg'), results)  
total_weight = sum(weights)  
print(total_weight)
```

This example queries for Pacific glass shrimp data between 2015 and 2019, summing the total weight caught. Note that most users will likely take advantage of built-in Python to ORDS query generation which dictates how the library communicates with the API service. However, users can provide raw ORDS queries as well using manual filtering.

12.0.7. Zero-catch inference

Until this point, these examples use presence-only data. However, the `afscgap` package can infer negative or “zero catch” records as well.

12. Access API data using Python

```
import afscgap

# Mapping from CPUE to count
count_by_cpue = {}

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
query.set_presence_only(False) # Added to earlier example
results = query.execute()

# Iterate through results and count
for record in results:
    cpue = record.get_cpue_weight(units='kg/ha')
    cpue_rounded = round(cpue)
    count = count_by_cpue.get(cpue_rounded, 0) + 1
    count_by_cpue[cpue_rounded] = count

# Print the result
print(count_by_cpue)
```

This example revisits the earlier snippet for CPUE counts but `set_presence_only(False)` directs the library to look at additional data on hauls, determining which hauls did not have Pacific glass shrimp. This lets the library return records for hauls in which Pacific glass shrimp were not found. This can be seen in differences in counts reported:

Rounded CPUE	Count with <code>set_presence_only(True)</code>	Count with <code>set_presence_only(False)</code>
0 kg/ha	44	521
1 kg/ha	7	7
2 kg/ha	1	1

Put simply, while the earlier example showed CPUE counts for hauls in which Pacific glass shrimp were seen, this revised example reports for all hauls in the Gulf of Alaska in 2021.

12. Access API data using Python

12.0.8. More information

Please see the API documentation for the Python library for additional details.

13. Access data using R (AFSC only)

If the user has access to the AFSC Oracle database, the user can use SQL developer to view and pull the FOSS public data directly from the RACEBASE_FOSS Oracle schema.

13.0.1. Connect to Oracle from R

Many users will want to access the data from Oracle using R. The user will need to install the RODBC R package and ask OFIS (IT) connect R to Oracle. Then, use the following code in R to establish a connection from R to Oracle:

Here, the user can write in their username and password directly into the RODBC connect function. Never save usernames or passwords in scripts that may be intentionally or unintentionally shared with others. If no username and password is entered in the function, pop-ups will appear on the screen asking for the username and password.

```
#' Define RODBC connection to ORACLE
#'
#' @param schema default = 'AFSC'.
#'
#' @return oracle channel connection
#' @export
#'
#' @examples
#' # Not run
#'
#' # channel <- oracle_connect()
oracle_connect <- function(
  schema='AFSC',
  username = NULL,
  passowrd = NULL){(echo=FALSE)

  library("RODBC")
  library("getPass")
  if (is.null(username)) {
```

13. Access data using R (AFSC only)

```
username <- getPass(msg = "Enter your ORACLE Username: ")
}
if (is.null(password)) {
  password <- getPass(msg = "Enter your ORACLE Password: ")
}
channel <- RODBC::odbcConnect(
  paste(schema),
  paste(username),
  paste(password),
  believeNRows=FALSE)
return(channel)
}

channel <- oracle_connect()
```

13.0.2. Ex. 1: Join data

To join these tables in Oracle, you may use a variant of the following code:

13.0.3. Ex. 2: Subset data

Once connected, pull and save (if needed) the tables into the R environment.

To pull a small subset of the data (especially since files like RACEBASE_FOSS.FOSS_-CPUE_ZEROILLED are so big), use a variation of the following code. Here, we are pulling EBS Pacific cod from 2010 - 2021:

```
# Pull data
a <- RODBC::sqlQuery(
  channel = channel,
  query =
  "SELECT * FROM GAP_PRODUCTS.FOSS_CATCH cc
  JOIN GAP_PRODUCTS.FOSS_HAUL hh
  ON cc.HAULJOIN = hh.HAULJOIN
  WHERE SRVY = 'EBS'
  AND COMMON_NAME = 'Pacific cod'
  AND YEAR >= 2010
  AND YEAR < 2021")
```

13. Access data using R (AFSC only)

```
# Save table to local directory  
write.csv(x = a, file = "RACEBASE_FOSS-FOSS_CPUE_ZEROFILED-ebs_pcod_2010-2020.csv")
```

14. Other products

14.1. Annual Publications

14.1.1. Annual Data Report Tech Memos

The Alaska Fisheries Science Center uses the NOAA Technical Memorandum series to issue informal scientific and technical publications when complete formal review and editorial processing are not appropriate or feasible. Documents within this series reflect sound professional work and may be referenced in the formal scientific and technical literature. These are available online and the latest publications for each survey are listed below.

14.1.2. Community Highlights

Each year, the Groundfish Assessment Program compiles its survey findings for communities around Alaska (Markowitz et al., 2022). *Please note: This document is for informational purposes only and does not necessarily represent the views or official position of the Department of Commerce, the National Oceanic and Atmospheric Administration, or the National Marine Fisheries Service. Not to be cited without permission from the authors.*

14.1.3. North Pacific Groundfish Plan Team

Each year, the survey teams present their findings to the North Pacific Groundfish Plan Team. Find those presentations, recordings, and attachments on the North Pacific Fishery Management Council website.

14. Other products

14.1.4. Research Briefs

Each year, the Groundfish Assessment Program produces research briefs, or research plans, of their upcoming surveys and research.

14.1.5. Code Books

The Species and Gear Code book is a listing of codes used for fish and invertebrates identified in RACE Division surveys.

14.1.6. Survey Protocols

Groundfish bottom trawl survey protocols are documented in NOAA protocols for groundfish bottom trawl surveys of the nation's fishery resources.

14.2. NOAA Fisheries Distribution Mapping and Analysis Portal (DisMAP)

Data from this and other fisheries-independent surveys are used in the NOAA Fisheries Distribution Mapping and Analysis Portal (DisMAP), which provides easy access to information to track and understand distributions of marine species in U.S. Marine Ecosystems.

14.3. R Packages

- akgfmaps R package: bottom trawl survey maps layers and plotting examples
- coldpool R package: cold pool area and temperature data products for the Bering Sea
- alkfishcondition R package: groundfish morphometric condition indicators for fish in the Bering Sea, Aleutian Islands, and Gulf of Alaska
- gapindex R package: calculation of Design-Based Indices of Abundance and Composition for AFSC GAP Bottom Trawl Surveys

14. Other products

14.4. Outreach

Maps of near real-time temperatures and survey progress from each of our bottom trawl surveys are posted each business day of the survey. Water temperature affects many species' spawning times, access to food, growth rates, and overall range. Collecting temperature data helps better understand species' habitats and the larger ecosystem.

14.5. Collaborators

Our data are used in many annual publications, including but not limited to the list below:

- Alaska Stock Assessments
- North Pacific Groundfish Stock Assessment and Fishery Evaluation Reports
- Groundfish Economic Status Reports for the Gulf of Alaska and Bering Sea and Aleutian Islands
- Alaska Marine Ecosystem Status Report Database
- Southeast Alaska Coastal Monitoring Survey Reports
- Alaska Fisheries Life History Database
- Essential Fish Habitat Research Plan in Alaska

Part VI.

```

18. Access Constraints

There are no legal restrictions on access to the data. They reside in public domain and can be freely distributed.

User Constraints: Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of AFSC Groundfish Assessment Program, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested.

19. Acknowledgments

20. Community Acknowledgments

We would like to thank the many communities of Alaska and their members who have helped contribute to this body of work. The knowledge, experiences, and insights have been instrumental in expanding the scope of our science and knowledge to encompass the many issues that face this important ecosystem. We appreciate feedback from those residing in the region that are willing to share their insights and participation in an open dialog about how we can improve our collective knowledge of the ecosystem and the region.

21. Technical Acknowledgments

This quarto book is based off the NOAA-quarto-book GitHub repo designed by Eli Holmes.

This repo and GitHub Action was based on the tutorial by Openscapes quarto-website-tutorial by Julia Lowndes and Stefanie Butland.

21.1. Partners

Scientists from the Alaska Fisheries Science Center conduct these bottom trawl surveys with participation from the Alaska Department of Fish & Game (ADF&G), the International Pacific Halibut Commission (IPHC), and universities. This research is conducted on chartered fishing vessels.
