# **AFSC RACE Groundfish and Shellfish Assessment Program Design-Based Production Data**

Please consider this resource to be a **Living Document**. The code in this repository is regularly being updated and improved. Please refer to releases for finalized products and project milestones.

## **What is the research objective?**

The objectives of these surveys are to:

- monitor trends in the marine ecosystem of the Bering Sea, Aleutian Islands, and Gulf of Alaska,
- produce fishery-independent biomass and abundance estimates for commercially important fish and crab species, and
- collect other biological and environmental data for use in ecosystem-based fishery management.

Learn more about the [program](<https://www.fisheries.noaa.gov/alaska/science-data/groundfish-assessment-program-bottom-trawl-surveys>)!

## 2.2. Access Constraints

There are no legal restrictions on access to the data. They reside in public domain and can be freely distributed.

**User Constraints:** Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of AFSC Groundfish Assessment Program, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested.

### **3. Contact-us**

**General questions and more specific data requests** can be sent to afsc.gap. metadata@noaa.gov or submitted as an issue on our GitHub Organization. The version of this data used for stock assessments can be found through the Alaska Fisheries Information Network (AKFIN). For questions about the eastern Bering Sea surveys, contact Duane Stevenson (Duane.Stevenson@noaa.gov). For questions about the Gulf of Alaska or Aleutian Islands surveys, contact Ned Laman (Ned.Laman@noaa.gov). For questions specifically about crab data in any region, contact Mike Litzow (Mike.Litzow@noaa.gov), the Shellfish Assessment Program lead.

For questions, comments, and concerns specifically about the Fisheries One Stop Shop (FOSS) platform, please contact us using the Comments page on the FOSS webpage.

## **4. Suggestions and comments**

If the data or metadata can be improved, please create a pull request, submit an issue to the GitHub organization or submit an issue to the code's repository.

**Part I.**

**AFSC RACE Groundfish Survey  
Production Data**

## **Data Description**

The Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC) conducts fisheries-independent bottom trawl surveys to monitor the condition of the demersal fish and crab stocks of Alaska. These data are developed to describe the temporal distribution and abundance of commercially and ecologically important groundfish species, examine the changes in the species composition of the fauna over time and space, and describe the physical environment of the groundfish habitat.

Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of NOAA, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested. These data are compiled and approved annually after each summer survey season. The data from previous years are unlikely to change substantially once published. Some survey data are excluded, such as non-standard stations, surveys completed in earlier years using different/non-standard gear, and special tows and non-standard data collections.

## **Cite this data**

Use the below bibtext citations, as cited in our group's citation repository for citing the data created and maintained in this repo (NOAA Fisheries Alaska Fisheries Science Center, Goundfish Assessment Program, 2023). Add "note = {Accessed: mm/dd/yyyy}" to append the day this data was accessed.

## **Data Creation**

These data are created using the gapindex R package.

## 5. GAP Production Data Metadata

### 5.1. Data created in this repo

#### 5.1.1. GAP\_PRODUCTS.AGECOMP

Stratum/subarea/management area/region-level abundance by sex/length bin. Sex-specific columns (i.e., MALES, FEMALES, UNSEXED), previously formatted in historical versions of this table, are melted into a single column (called SEX) similar to the AGECOMP tables with values 1/2/3 for M/F/U. The AREA\_ID field replaces the STRATUM field name to generalize the description to include different types of areas (strata, subareas, regulatory areas, regions, etc.). Use the GAP\_PRODUCTS.AREA table to look up the values of AREA\_ID for your particular region. by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). There are legal restrictions on access to the data. These data are not intended for public dissemination and should not be shared without the explicit written consent of the data managers and owners (NOAA Fisheries). The GitHub repository for the scripts that created this code can be found at [https://github.com/afsc-gap-products/gap\\_products](https://github.com/afsc-gap-products/gap_products). For more information about codes used in the tables, please refer to the survey code books (<https://www.fisheries.noaa.gov/resource/document/groundfish-survey-species-code-manual-and-data-codes-manual>). These data were last updated June 27, 2023.

rows: 719695 | cols: 9

SURVEY_DEFINITION_ID	AREA_ID	YEAR	SPECIES_CODE	SEX	AGE	POPULATION_COUNT	LEN
143	99902	2010	21370	3	-9	620288	
143	99902	2017	21370	1	-9	1846350	
143	99902	2017	21370	2	-9	1927790	

## 5. GAP Production Data Metadata

### 5.1.2. GAP\_PRODUCTS.AREA

This reference table stores all metadata and estimates for all estimates of stratum and subarea area estimates. Use this table with the STRATUM\_GROUPS and SURVEY\_DESIGN tables. by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). There are legal restrictions on access to the data. These data are not intended for public dissemination and should not be shared without the explicit written consent of the data managers and owners (NOAA Fisheries). The GitHub repository for the scripts that created this code can be found at [https://github.com/afsc-gap-products/gap\\_products](https://github.com/afsc-gap-products/gap_products). For more information about codes used in the tables, please refer to the survey code books (<https://www.fisheries.noaa.gov/resource/document/groundfish-survey-species-code-manual-and-data-codes-manual>). These data were last updated June 27, 2023.

rows: 473 | cols: 10

SURVEY_DEFINITION_ID	DESIGN_YEAR	AREA_ID	TYPE	AREA_NAME	DESCRIPTION
98	2022	62	STRATUM	Outer Domain	100-200 m, NW sec
143	2022	70	STRATUM	Inner Domain	<50 m , N of standa
143	2022	71	STRATUM	Inner Domain	<50 m, Norton Sour

### 5.1.3. GAP\_PRODUCTS.BIOMASS

Stratum/subarea/management area/region-level mean/variance CPUE (weight and numbers), total biomass (with variance), total abundance (with variance). The AREA\_ID field replaces the STRATUM field name to generalize the description to include different types of areas (strata, subareas, regulatory areas, regions, etc.). Use the GAP\_PRODUCTS.AREA table to look up the values of AREA\_ID for your particular region. Note confidence intervals are currently not supported in the GAP\_PRODUCTS version of the biomass/abundance tables. The associated variance of estimates will suffice as the metric of variability to use. by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). There are legal restrictions on access to the data. These data are not intended for public dissemination and should not be shared without the explicit written consent of the data managers and owners (NOAA Fisheries). The GitHub repository for the scripts that created this code can be found at [https://github.com/afsc-gap-products/gap\\_products](https://github.com/afsc-gap-products/gap_products). For more information about codes used in the tables, please refer to the survey code books

## 5. GAP Production Data Metadata

(<https://www.fisheries.noaa.gov/resource/document/groundfish-survey-species-code-manual-and-data-codes-manual>). These data were last updated June 27, 2023.

## 5. GAP Production Data Metadata

### 5.1.6. GAP\_PRODUCTS.METADATA\_TABLE

These column provide the column metadata for all GAP oracle tables. These tables are created by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). The GitHub repository for the scripts that created this code can be found at [https://github.com/afsc-gap-products/gap\\_products](https://github.com/afsc-gap-products/gap_products). These data were last updated June 27, 2023. There are no legal restrictions on access to the data. For more information about codes used in the tables, please refer to the survey code books (<https://www.fisheries.noaa.gov/resource/document/groundfish-survey-species-code-manual-and-data-codes-manual>).

rows: 8 | cols: 3

METADATA_SENTENCE_NAME	METADATA_SENTENCE_TYPE	METADATA_SENTENCE
survey_institution	fragment	by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC)
legal_restrict	sentence	There are legal restrictions on access to the data.
legal_restrict_none	sentence	There are no legal restrictions on access to the data.

### 5.1.7. GAP\_PRODUCTS.STRATUM\_GROUPS

This reference table identifies which STRATUM (the lowest common denominator of statistical area groupings in this survey) relate to what greater statistical areas (AREA\_ID), along with what year (DESIGN\_YEAR) and survey (SURVEY\_DEFINITION\_ID) that pairing is relevant to. Use this table with the AREA and SURVEY\_DESIGN tables. by the Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC). There are legal restrictions on access to the data. These data are not intended for public dissemination and should not be shared without the explicit written consent of the data managers and owners (NOAA Fisheries). The GitHub repository for the scripts that created this code can be found at [https://github.com/afsc-gap-products/gap\\_products](https://github.com/afsc-gap-products/gap_products). For more information about codes used in the tables, please refer to the survey code books (<https://www.fisheries.noaa.gov/resource/document/groundfish-survey-species-code-manual-and-data-codes-manual>). These data were last updated June 27, 2023.

rows: 744 | cols: 4

## 5. GAP Production Data Metadata

*In development*

## **11.2. Data created in this repo**

## **12. AFSC RACE Groundfish Data for AKFIN in Oracle with SQL and R'**

### **12.1. Access data via Oracle (AFSC only)**

AFSC Oracle users can access the database via SQL developer to view and pull the production data directly from the GAP\_PRODUCTS Oracle schema.

#### **12.1.1. Connect to Oracle from R**

Many users will want to access the data from Oracle using R. The user will need to install the RODBC R package and ask OFIS (IT) connect R to Oracle. Then, use the following code in R to establish a connection from R to Oracle:

Here, the user can write in their username and password directly into the RODBC connect function. Never save usernames or passwords in scripts that may be intentionally or unintentionally shared with others. If no username and password is entered in the function, pop-ups will appear on the screen asking for the username and password.

# **13. Connect to Oracle from R**

## **13.1. Access data via Oracle**

If the user has access to the AFSC Oracle database, the user can use SQL developer to view and pull the GAP Products data directly from the GAP\_PRODUCTS Oracle schema.

### **13.1.1. Connect to Oracle from R**

Many users will want to access the data from Oracle using R. The user will need to install the RODBC R package and ask OFIS (IT) connect R to Oracle. Then, use the following code in R to establish a connection from R to Oracle:

Here, the user can establish the oracle connection by entering their username and password in the channel `<- gapindex::oracle_connect()` function. Never save usernames or passwords in scripts that may be intentionally or unintentionally shared with others. If no username and password is entered in the function, pop-ups will appear on the screen asking for the username and password.

## 14. Data SQL Query Examples:

### 14.0.1. Ex. 0: Select all data from a table

You can download all of the tables locally using a variation of the code below. Once connected, pull and save the tables of interest into the R environment.

### 14.0.2. Ex. 1: GOA Pacific Ocean perch biomass and abundance

Biomass and abundance for Pacific Ocean perch from 1990 – 2023 for the western/central/eastern GOA management areas as well as for the entire region.

Table 14.1.: Ex. 1: GOA Pacific Ocean perch biomass and abundance.

## **Part III.**

# **AFSC RACE Groundfish and Shellfish Survey Public Data**

This data contains all of the catch, environmental, and haul data from the fisheries-independent Groundfish and Shellfish Assessment Program surveys in the Bering Sea, Aleutian Islands, and Gulf of Alaska. This data is sought after by the general public, private entities, and NOAA partners alike, including tribal organizations, K-12 classrooms, academic institutions, for-profit groups, and non-profit groups. This data is compiled and approved once a year after each summer survey season and is approved for open access.

**Part IV.**

**Collabrators and data users**

## **15. GAP FOSS Column Metadata**

# **16. Metadata**

## **16.1. Data description**

The Resource Assessment and Conservation Engineering Division (RACE) Groundfish Assessment Program (GAP) of the Alaska Fisheries Science Center (AFSC) conducts fisheries-independent bottom trawl surveys to monitor the condition of the demersal fish and crab stocks of Alaska. These data are developed to describe the temporal distribution and abundance of commercially and ecologically important groundfish species, examine the changes in the species composition of the fauna over time and space, and describe the physical environment of the groundfish habitat.

There are no legal restrictions on access to the data. They reside in the public domain and can be freely distributed. Users must read and fully comprehend the metadata prior to use. Data should not be used beyond the limits of the source scale. Acknowledgement of NOAA, as the source from which these data were obtained, in any publications and/or other representations of these data, is suggested. These data are compiled and approved annually after each summer survey season. The data from previous years are unlikely to change substantially once published.

These data are zero-filled (presence and absence) observations from surveys conducted on fishing vessels. These surveys monitor trends in distribution and abundance of groundfish, crab, and bottom-dwelling species in Alaska's marine ecosystems. These data include estimates of catch-per-unit-effort (CPUE) for all identified species for index stations. Some survey data are excluded, such as non-standard stations, surveys completed in earlier years using different/non-standard gear, and special tows and non-standard data collections.

Though not included in the public data, these surveys also collect oceanographic and environmental data, and biological data such as length, weight, stomach contents (to learn more about diet), otoliths (fish ear bones to learn about age), and tissue samples for genetic analysis, all of which can be shared upon special request. Also not included in the public data are estimated biomass (average total weight of all fish and crabs sampled) of crabs and groundfish that support the creation of annual stock assessments.

## **17. Access public data using the FOSS Interactive Platform**

## **18. Quick Start Guide: Access AFSC data interactively through the FOSS platform**

### **18.1. Select and filter**

Select, filter, and package this and other NOAA Fisheries data from the Fisheries One Stop Shop (FOSS) platform. A user guide for the FOSS platform can be found [here](#). To begin a report, select options from the boxes what you need data for.

For a given box, select one or a few options from the “options box” (list on the left) to query by highlighting them. To select multiple options, hold down the CTRL key while clicking on the options of interest, or click and drag down the list. Once the options you wish to be included in your query are highlighted, click the right-pointing arrow (>) to move them into the “selection box” (list on the right). If you accidentally select an option that you do not want to query, simply select the unwanted option from the selection box and click the left-pointing arrow (<).

If you wish to select all options from the options box and send them to the selection box, simply click the double right-pointing arrow (>>). If you want to unselect all options from the selection box, use the double left-pointing arrow (<<) or the reset icon.

To find a specific species or group more quickly you can use the `Search Species` option to quickly narrow the options. Search for parts of species common names in the `Search Species` box by entering a term and clicking the `search` button. The platform will return a shorter list in the `Species` options box of only species that contain a match to that search term.

Use the `Reset All Parameters` button to reset all parameters for entire form.

Filter options:

- Survey: Each survey has different in design, time series, and history. More information on each survey and their designs can be found in our annual data reports.

## 18. Quick Start Guide: Access AFSC data interactively through the FOSS platform

The screenshot shows the AFSC Groundfish and Crab Assessment Program Bottom Trawl Surveys data interface. At the top, the NOAA Fisheries logo is visible. The main title "AFSC Groundfish and Crab Assessment Program" and "Bottom Trawl Surveys" is centered above a sub-header "Survey data also available through API". On the left, a sidebar menu includes links to FUS Report, Landings, Foreign Trade, Top US Ports, Processed Products, Per Capita Consumption, Supply, USCG Vessels, AFSC GAP Survey (which is selected), AFSC GAP Metadata, Partners, Metadata and Caveats, Frequently Asked Questions, Quick Start Guide, and Comments. The main content area has a blue header "Data Caveats" which contains a detailed description of the survey's purpose and limitations. Below this is a "Parameters" section with three dropdown menus: "Survey" (listing Aleutian Islands Bottom Trawl Survey, Eastern Bering Sea Slope Bottom Trawl Survey, Eastern Bering Sea Crab/Groundfish Bottom Trawl Survey, Gulf of Alaska Bottom Trawl Survey, Northern Bering Sea Crab/Groundfish Survey - Eastern Bering Sea Shelf S), "Year" (listing years from 2022 down to 2014), and "Species" (listing Abalone Jingle, Abietinaria, Abyssal Crangon, Acanthascus, Acantholithodes, Achanax johnsoni, Acoel Turbellarian, Acteocina). There is also a "Search Species" input field and "Search" and "Reset All Parameters" buttons. At the bottom, a "Data Format" section offers options like "All Data Fields", "Catch Data: All Units", "Catch Data: Hectares", "Catch Data: Square Thousand km", "Catch Data: Square km", and "Haul Data". A large "RUN REPORT" button is at the bottom right.

Figure 18.1.: AFSC Groundfish and Crab Assessment Program Bottom Trawl Survey data interface on the Fisheries One Stop Shop platform.

## 18. Quick Start Guide: Access AFSC data interactively through the FOSS platform

Figure 18.2.: Diagram of selection and search tools available on the FOSS platofrom.

- **Year:** Surveys are not conducted in all years, so only data from the years for which the survey was conducted will be returned.
- **Species:** Common name of all species ever encountered in the survey. Find more information about these species in our survey code books.

In this example, we'll select for 2022 eastern Bering Sea Pacific cod data. Here, we used the Search Species box to search for species with the term "cod" in their common names and selected "Pacific cod" from that shortened list.

### 18.2. Select data format

Select from the below radio list of pre-designed output tables. Once you run the report, the user can further specify filter data and select columns of interest. The tables below will only include data from the selections made in the previous step.

- **All Data Fields: Presence and Absence (zero-filled):** The most complete version of the data, including species, catch, haul, and environmental data. This data will include catch data for where species were caught and zeros for where the species were not caught. This is important for calculating catch-per-unit-effort data, preparing distribution plots (e.g., using the akgfmaps R package), and many statistical analyses.

## 18. Quick Start Guide: Access AFSC data interactively through the FOSS platform

Figure 18.3.: Diagram of selection and search tools available on the FOSS platoform.

- All Data Fields: Presence-only (non-zero): The second most complete version of the data, including species, catch, haul, and environmental data. However, this data only includes catch data for where species were caught and does not include zeros for where the species were not caught. This will return smaller, more focused data and can be useful for quickly assessing how many species were caught or how many stations species were caught at.
- Catch data: Presence and Absence (zero-filled): This data set is similar to All Data Fields: Presence and Absence (zero-filled), but only includes catch and species data columns.
- Catch data: Presence-only (non-zero): This data set is similar to All Data Fields: Presence-only (non-zero), but only includes catch and species data columns.
- Haul Data: This data set only includes haul and environmental data collected from the survey. This data will only include one observation per haul event/station.

In this example, we'll select All Data Fields: Presence and Absence (zero-filled).

## 18. Quick Start Guide: Access AFSC data interactively through the FOSS platform

Figure 18.4.: Diagram of the pre-set data format options.

### 18.3. Run report

Click the **RUN REPORT** button. Below the select and filter area, the results of your query will appear below the page in the format you selected. To change the format, make a different selection and run the report again. Further modifications to your results can be made by clicking on the **Actions** button above your data. Here you can download your data, select columns included in your results, and apply a variety of filters and mathematical tools.

The screenshot shows a report interface with a table of survey data. A context menu is open over the first row of the table, listing options: Select Columns, Filter, Rows Per Page, Format, Flashback, Reset, Help, and Download.

Year	Srvy	Survey	Survey Id	Cruise	Hours	Actions

Figure 18.5.: Example data returned from running the report.

## **19. Access public data using the API and R**

## **20. Connect to the API with R**

An application programming interface (API) is a way for two or more computer programs to communicate with each other.

More information about how to amend API links can be found [here](#). Useful introductions to using APIs in R can be found [here](#).

## 21. API in action

### 21.1. Ex. 1: Load the first 25 rows (default) of data

```
# install.packages(c("httr", "jsonlite"))
library(httr)
library(jsonlite)
library(dplyr)
# link to the API
api_link <- "https://apps-st.fisheries.noaa.gov/ods/foss/afsc_groundfish_survey/"

res <- httr::GET(url = api_link)
# res # Test connection
data <- jsonlite::fromJSON(base::rawToChar(res$content))
# names(data)
flextable::flextable(head(data$items, 3))
```

yearsrvy	survey	survey_id	cruise	haul	stratum	station	vessel_name	vessel_
2,002AI	Aleutian Islands Bottom Trawl Survey	5.2E+001	2.00201E+000	6.05E+000	7.22E+002	307-63	Vesteraale	0.4E+000

year	srvy	survey	survey_id	cruise	haul	stratum	station	vessel_name	vessel_id
2,002	AI	Aleutian Islands Bottom Trawl Survey		5.2E+001	2.00201E+000	7.22E+002	307-63	Vesteraale	0.4E+000
2,002	AI	Aleutian Islands Bottom Trawl Survey		5.2E+001	2.00201E+000	7.22E+002	307-63	Vesteraale	0.4E+000

## 21.2. Ex. 2: Load the first 10000 rows of data

```
# Not run because too big:
res <- httr::GET(url = paste0(api_link, "?offset=0&limit=10000"))
data <- jsonlite::fromJSON(base::rawToChar(res$content))
print(paste0("rows: ", dim(data$items)[1], "; cols: ", dim(data$items)[2]))
```

[1] "rows: 10000; cols: 36"

## 21.3. Ex. 3: Filter by Year

Show all the data greater than the year 2020.

```
res <- httr::GET(url = paste0(api_link, '?q={"year": {"$gt": 2020}}'))
data <- jsonlite::fromJSON(base::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")])
```

## 21. API in action

Table 21.2.: Ex. 3: Filter by Year.

yearsrvy	stratum	species_code	cpue_kgkm2
2,022AI	7.22E+002	1.0261E+004	733258200000002E+002
2,022AI	7.93E+002	8.054E+004	3.6112E-001
2,022AI	7.22E+002	2.1347E+004	5809130500000003E+002

### 21.4. Ex. 4: Filter by species name

Show all the data where the product name contains pollock Please note that here the word pollock is case sensitive.

The notation for finding a string is to use % around it. Since % is a reserved character in a URL, you have to replace % with %25.

```
res <- httr::GET(
  url = paste0(api_link, '?q={"common_name":{"$like": "%pollock%25"}})')
data <- jsonlite::fromJSON(base::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")])
```

Table 21.3.: Ex. 4: Filter by species name.

yearsrvy	stratum	species_code	cpue_kgkm2
2,002AI	7.21E+002	2.174E+004	6.398909999999999E-001
2,002AI	7.22E+002	2.174E+004	7.532226400000002E+002
2,002AI	7.22E+002	2.174E+004	0.0685806397E+004

## 21.5. Ex. 5: Combination of year and name filters

Show all the data where years > 2020 and the product name contains pollock

```
res <- httr::GET(
  url = paste0(api_link,
    '?q={"year": {"$gt": 2020}, "common_name": {"$like": "%pollock%"} }'))
data <- jsonlite::fromJSON(base::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")])
```

Table 21.4.: Ex. 5: Combination of year and name filters.

yearsrvy	stratum	species_- code	cpue_- kgkm2
2,022AI	7.22E+0022.174E+004	2.2754334435000001E+004	
2,022AI	7.93E+0022.174E+004	8.536315350000004E+003	
2,022AI	7.21E+0022.174E+004	2.350103259999996E+003	

## 21.6. Ex. 6: Combination of year, srvy, stratum

Show all the data where year = 1989, srvy = "EBS", and stratum is not equal to 81

```
res <- httr::GET(
  url = paste0(api_link, '?q={"year": 1989, "srvy": "EBS", "stratum": {"$ne": "81"} }'))
data <- jsonlite::fromJSON(base::rawToChar(res$content))
flextable::flextable(
  data$items[1:3, c("year", "srvy", "stratum", "species_code", "cpue_kgkm2")])
```

Table 21.5.: Ex. 6: Combination of year, srvy, stratum.

yearsrvy	stratum	species_code	cpue_kgkm2
1,989EBS	1.0E+001	4.05E+004	9.6200360000000007E+000
1,989EBS	1.0E+001	6.8578E+004	6200360000000007E+000
1,989EBS	1.0E+001	2.1313E+004	8179039E+001

## 21.7. Ex. 7: Visualize CPUE data in distribution map

Pacific cod catch-per-unit-effort estimates for NBS in 2021 and map constructed using `akgfmaps`.

```
# res <- httr::GET(
#   url = paste0(api_link, "?offset=0&limit=10000"),
#   query = list(year = 2021, srvy = "EBS", species_code = 30060))
res <- httr::GET(
  url = paste0(api_link, '?q={"year":2021,"srvy":"NBS","species_code":21720}'))
data_catch <- jsonlite::fromJSON(base::rawToChar(res$content))$items %>%
  dplyr::select(stratum, station, cpue_kgkm2)

# zero-fill data (imperfectly, but effective for this example)
res <- httr::GET(
  url = paste0(api_link, '?q={"year":2021,"srvy":"NBS"}offset=0&limit=10000'))
data_haul <- jsonlite::fromJSON(base::rawToChar(res$content))$items %>%
  dplyr::select(stratum, station, latitude_dd, longitude_dd) %>%
  dplyr::distinct()

data <- dplyr::left_join(data_haul, data_catch) %>%
  dplyr::mutate(cpue_kgkm2 = ifelse(is.na(cpue_kgkm2), 0, cpue_kgkm2),
    dplyr::across(dplyr::everything(), as.numeric))

flextable::flextable(data[1:3,])
```

## 21. API in action

Table 21.6.: Ex. 7: Visualize CPUE data in distribution map.

stratum	station	latitude_dd	longitude_dd	cpue_kgkm2
71		63.70028	-171.0225	1.183039
81		61.68600	-173.07761	3,256.716473
81		61.34965	-172.22516	0.958261

```
# devtools::install_github("afsc-gap-products/akgfmaps", build_vignettes = TRUE)
library(akgfmaps)

figure <- akgfmaps::make_idw_map(
  CPUE_KGHA = data$cpue_kgkm2, # calculates the same, regardless of units.
  LATITUDE = data$latitude_dd,
  LONGITUDE = data$longitude_dd,
  region = "bs.north", # Predefined EBS area
  set.breaks = "jenks", # Gets Jenks breaks from classint::classIntervals()
  in.crs = "+proj=longlat", # Set input coordinate reference system
  out.crs = "EPSG:3338", # Set output coordinate reference system
  grid.cell = c(20000, 20000), # 20x20km grid
  key.title = "Pacific Ocean perch") # Include in the legend title

[inverse distance weighted interpolation]
[inverse distance weighted interpolation]

figure$plot +
  ggplot2::guides(fill=guide_legend(title = "Pacific cod\nCPUE (kg/km2)"))
```

## 21. API in action

Figure 21.1.: Ex. 7: Visualize CPUE data in distribution map.

## 22. Access public data using the API and Python

### 22.0.1. {afscgap} Library Installation

author: Sam Pottinger (sam.pottinger@berkeley.edu; GitHub::sampottinger)  
date: May 13, 2023

The third-party afscgap Python package interfaces with FOSS to access AFSC GAP data. It can be installed via pip:

```
#The reticulate package provides a comprehensive set of tools for interoperability between
library(reticulate)

pip install afscgap
pip install git+https://github.com/SchmidtDSE/afscgap.git@main
```

For more information on installation and deployment, see the library documentation.

### 22.0.2. Basic query

This first example queries for Pacific glass shrimp (*Pasiphaea pacifica*) in the Gulf of Alaska in 2021. The library will automatically generate HTTP queries, converting from Python types to ORDS query syntax.

```
import afscgap

query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
```

## 22. Access public data using the API and Python

```
results = query.execute()
```

The `results` variable in this example is an iterator that will automatically perform pagination behind the scenes.

### 22.0.3. Iterating with a for loop

The easiest way to interact with results is a simple for loop. This next example determines the frequency of different catch per unit effort where Pacific glass shrimp were reported:

```
import afscgap

# Mapping from CPUE to count
count_by_cpue = {}

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
results = query.execute()

# Iterate through results and count
for record in results:
    cpue = record.get_cpue_weight(units='kg/ha')
    cpue_rounded = round(cpue)
    count = count_by_cpue.get(cpue_rounded, 0) + 1
    count_by_cpue[cpue_rounded] = count

# Print the result
print(count_by_cpue)
```

Note that, in this example, only records with Pacific glass shrimp are included ("presence-only" data). See zero catch inference below. In other words, it reports on CPUE only for hauls in which Pacific glass shrimp were recorded, excluding some hauls like those in which Pacific glass shrimp were not found at all.

## 22. Access public data using the API and Python

### 22.0.4. Iterating with functional programming

A for loop is not the only option for iterating through results. List comprehensions and other functional programming methods can be used as well.

```
import statistics

import afscgap

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
results = query.execute()

# Get temperatures in Celsius
temperatures = [record.get_bottom_temperature(units='c') for record in results]

# Take the median
print(statistics.median(temperatures))
```

This example reports the median temperature in Celcius for when Pacific glass shrimp was reported.

### 22.0.5. Load into Pandas

The results from the afscgap package are serializable and can be loaded into other tools like Pandas. This example loads Pacific glass shrimp from 2021 Gulf of Alaska into a data frame.

```
import pandas

import afscgap

query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
```

## 22. Access public data using the API and Python

```
results = query.execute()  
  
pandas.DataFrame(results.to_dicts())
```

Specifically, `to_dicts` provides an iterator over a dictionary form of the data that can be read into tools like Pandas.

### 22.0.6. Advanced filtering

Queries so far have focused on filters requiring equality but range queries can be built as well.

```
import afscgap  
  
# Build query  
query = afscgap.Query()  
query.filter_year(min_val=2015, max_val=2019)    # Note min/max_val  
query.filter_srvy(eq='GOA')  
query.filter_scientific_name(eq='Pasiphaea pacifica')  
results = query.execute()  
  
# Sum weight  
weights = map(lambda x: x.get_weight(units='kg'), results)  
total_weight = sum(weights)  
print(total_weight)
```

This example queries for Pacific glass shrimp data between 2015 and 2019, summing the total weight caught. Note that most users will likely take advantage of built-in Python to ORDS query generation which dictates how the library communicates with the API service. However, users can provide raw ORDS queries as well using manual filtering.

### 22.0.7. Zero-catch inference

Until this point, these examples use presence-only data. However, the `afscgap` package can infer negative or “zero catch” records as well.

## 22. Access public data using the API and Python

```
import afscgap

# Mapping from CPUE to count
count_by_cpue = {}

# Build query
query = afscgap.Query()
query.filter_year(eq=2021)
query.filter_srvy(eq='GOA')
query.filter_scientific_name(eq='Pasiphaea pacifica')
query.set_presence_only(False) # Added to earlier example
results = query.execute()

# Iterate through results and count
for record in results:
    cpue = record.get_cpue_weight(units='kg/ha')
    cpue_rounded = round(cpue)
    count = count_by_cpue.get(cpue_rounded, 0) + 1
    count_by_cpue[cpue_rounded] = count

# Print the result
print(count_by_cpue)
```

This example revisits the earlier snippet for CPUE counts but `set_presence_only(False)` directs the library to look at additional data on hauls, determining which hauls did not have Pacific glass shrimp. This lets the library return records for hauls in which Pacific glass shrimp were not found. This can be seen in differences in counts reported:

Rounded CPUE	Count with <code>set_presence_only(True)</code>	Count with <code>set_presence_only(False)</code>
0 kg/ha	44	521
1 kg/ha	7	7
2 kg/ha	1	1

Put simply, while the earlier example showed CPUE counts for hauls in which Pacific glass shrimp were seen, this revised example reports for all hauls in the Gulf of Alaska in 2021.

## *22. Access public data using the API and Python*

### **22.0.8. More information**

Please see the API documentation for the Python library for additional details.

# 23. Access public data using R in Oracle

## 23.1. Access data via Oracle (AFSC only)

If the user has access to the AFSC Oracle database, the user can use SQL developer to view and pull the FOSS public data directly from the RACEBASE\_FOSS Oracle schema.

### 23.1.1. Connect to Oracle from R

Many users will want to access the data from Oracle using R. The user will need to install the RODBC R package and ask OFIS (IT) connect R to Oracle. Then, use the following code in R to establish a connection from R to Oracle:

Here, the user can write in their username and password directly into the RODBC connect function. Never save usernames or passwords in scripts that may be intentionally or unintentionally shared with others. If no username and password is entered in the function, pop-ups will appear on the screen asking for the username and password.

```
#' Define RODBC connection to ORACLE
#'
#' @param schema.default = 'AFSC'.
#'
#' @return oracle channel connection
#' @export
#'
#' @examples
#' # Not run
#' # channel <- oracle_connect()
oracle_connect <- function(
  schema='AFSC',
  username = NULL,
  password = NULL){(echo=FALSE)}
```

## 23. Access public data using R in Oracle

```
library("RODBC")
library("getPass")
if (is.null(username)) {
  username <- getPass(msg = "Enter your ORACLE Username: ")
}
if (is.null(password)) {
  password <- getPass(msg = "Enter your ORACLE Password: ")
}
channel <- RODBC::odbcConnect(
  paste(schema),
  paste(username),
  paste(password),
  believeNRows=FALSE)
return(channel)
}

channel <- oracle_connect()
```

### 23.1.2. Ex. 1: Join data

To join these tables in Oracle, you may use a variant of the following code:

### 23.1.3. Ex. 2: Subset data

Once connected, pull and save (if needed) the tables into the R environment.

To pull a small subset of the data (especially since files like RACEBASE\_FOSS.FOSS\_-CPUE\_ZEROILLED are so big), use a variation of the following code. Here, we are pulling EBS Pacific cod from 2010 - 2021:

```
# Pull data
a <- RODBC::sqlQuery(
  channel = channel,
  query =
  "SELECT * FROM GAP_PRODUCTS.FOSS_CATCH cc
  JOIN GAP_PRODUCTS.FOSS_HAUL hh
  ON cc.HAULJOIN = hh.HAULJOIN
  WHERE SRVY = 'EBS'
```

### *23. Access public data using R in Oracle*

```
AND COMMON_NAME = 'Pacific cod'  
AND YEAR >= 2010

## **24. Acknowledgments**

## **25. Community Acknowledgments**

We would like to thank the many communities of Alaska and their members who have helped contribute to this body of work. The knowledge, experiences, and insights have been instrumental in expanding the scope of our science and knowledge to encompass the many issues that face this important ecosystem. We appreciate feedback from those residing in the region that are willing to share their insights and participation in an open dialog about how we can improve our collective knowledge of the ecosystem and the region.

## **26. Technical Acknowledgments**

This quarto book is based off the NOAA-quarto-book GitHub repo designed by Eli Holmes.

This repo and GitHub Action was based on the tutorial by Openscapes quarto-website-tutorial by Julia Lowndes and Stefanie Butland.

### **26.1. Partners**

Scientists from the Alaska Fisheries Science Center conduct these bottom trawl surveys with participation from the Alaska Department of Fish & Game (ADF&G), the International Pacific Halibut Commission (IPHC), and universities. This research is conducted on chartered fishing vessels.

## **27. Production Run Notes**
